Living Room Path Standard

AID-SPC-002

1. Purpose

This standard defines the complete customer input path after Living Room is selected in AID-SPC-001. The path is intentionally lean: AIDOOi collects only information required to improve product and room recommendations, while avoiding unnecessary customer questions.

2. Entry Condition

Trigger: Customer selects **Living Room** in the Step 1 question, *What are you furnishing?*

3. Living Room Customer Path

Step	Input	Requirement / Reference
1	Room Dimensions	Required - Length and Width
2	Room Photos / Floor Plan	Optional - recommended when available
3	Style Preference	Reference: AID-DATA-009
4	Colour Preference	Reference: AID-DATA-007
5	Budget Tier	Reference: AID-LOG-001
6	Recommendation	AIDOOi proceeds to matching and composition

4. Room Dimensions

Length: Required
Width: Required
The customer should provide actual room dimensions rather than manually selecting Small, Medium, or Large. The system calculates room area from the entered dimensions and may derive a size classification internally.

System-derived: Room Area and Size Classification (for example Small / Medium / Large). These are not customer-entered values.

5. Photos and Floor Plan

Room photos and a floor plan or layout are **optional**. They may be used to improve spatial understanding and recommendation accuracy when supplied, but their absence must not prevent the customer from continuing through the Living Room path.

6. Style Preference

The customer provides a preferred style or may choose an AIDOOi-assisted / undecided option where supported by the interface. Style values must use the controlled style structure defined in **AID-DATA-009 - Product Style Standard**.

7. Colour Preference

The customer provides a colour preference using the controlled colour structure defined in **AID-DATA-007 - Product Colour Standard**. This keeps customer preference data directly traceable to canonical product colour data.

8. Budget Tier

Budget is collected using the common AIDOOi tier names: **Essential / Value / Standard / Premium / Luxury**.

The tier names remain consistent across AIDOOi, while the monetary range represented by each tier may differ by furnishing path. Living Room budget ranges and price-matching behavior are governed by **AID-LOG-001 - Budget & Price Matching Logic**.

9. Recommendation Handoff

Once the required Living Room inputs are complete, AIDOOi proceeds to recommendation and room composition. No additional Living Room-specific customer questions are required by this standard.

10. Lean Input Principle

AIDOOi should not add Living Room-specific questions unless future MVP testing demonstrates that the missing information materially improves recommendation quality.
