# Bedroom Path Standard

**AID-SPC-003**

## 1. Purpose

This standard defines the complete customer input path after Bedroom is selected in AID-SPC-001. The path follows AIDOOi's lean-input principle and collects only information that materially affects bedroom recommendation and composition.

## 2. Entry Condition

**Trigger:** Customer selects **Bedroom** in the Step 1 question, *What are you furnishing?*.

## 3. Bedroom Customer Path

| Step | Input | Requirement / Reference |
|---|---|---|
| 1 | Room Dimensions | Required - Length and Width |
| 2 | Preferred Bed Size | Required - Ref: AID-CAT-004 |
| 3 | Room Photos / Floor Plan | Optional - recommended when available |
| 4 | Style Preference | Ref: AID-DATA-009 |
| 5 | Colour Preference | Ref: AID-DATA-007 |
| 6 | Budget Tier | Ref: AID-LOG-001 |
| 7 | Recommendation | Proceed to matching and room composition |

## 4. Room Dimensions

**Length:** Required
**Width:** Required
The customer provides actual bedroom dimensions. AIDOOi calculates room area and may derive an internal size classification such as Small, Medium, or Large. The customer is not required to estimate this classification.

## 5. Preferred Bed Size

Preferred Bed Size is **required** because it materially affects bed selection, available circulation space, compatible supporting furniture, and the overall bedroom composition. The selectable values must follow the bed-size structure defined in **AID-CAT-004 - Beds Standard**.

If the preferred bed size is not spatially suitable for the supplied room dimensions, AIDOOi should not silently change the customer's selection. Compatibility handling and alternative recommendations belong to the relevant system logic standards.

## 6. Photos and Floor Plan

Bedroom photos and a floor plan or layout are **optional**. They may improve spatial understanding and recommendation accuracy when supplied, but their absence must not block the customer journey.

## 7. Style Preference

Style preference must use the controlled structure defined in **AID-DATA-009 - Product Style Standard**. An AIDOOi-assisted or undecided option may be supported in the customer interface.

## 8. Colour Preference

Colour preference must use the controlled colour structure defined in **AID-DATA-007 - Product Colour Standard**, maintaining direct traceability between customer preferences and canonical product data.

## 9. Budget Tier

Budget is collected using the common AIDOOi tier names: **Essential / Value / Standard / Premium / Luxury**. The monetary ranges applicable to the Bedroom path are governed by **AID-LOG-001 - Budget & Price Matching Logic**.

## 10. Recommendation Handoff

After the required Bedroom inputs are complete, AIDOOi proceeds to product matching and bedroom composition. No additional Bedroom-specific questions are required by this standard.

## 11. Lean Input Principle

**Additional Bedroom-specific questions should not be introduced unless MVP testing demonstrates that they materially improve recommendation quality.**
