Home Office Path Standard

AID-SPC-005

1. Purpose

This standard defines the complete customer input path after Home Office is selected in AID-SPC-001. The path follows AIDOOi's lean-input principle and collects only information that materially affects workspace recommendation and composition.

2. Entry Condition

Trigger: Customer selects **Home Office** in the Step 1 question, *What are you furnishing?*.

3. Home Office Customer Path

Step	Input	Requirement / Reference
1	Room Dimensions	Required - Length and Width
2	Number of Workspace Users	Required - 1 / 2 / 3+
3	Room Photos / Floor Plan	Optional - recommended when available
4	Style Preference	Ref: AID-DATA-009
5	Colour Preference	Ref: AID-DATA-007
6	Budget Tier	Ref: AID-LOG-001
7	Recommendation	Proceed to matching and room composition

4. Room Dimensions

Length: Required
Width: Required
The customer provides actual Home Office dimensions. AIDOOi calculates room area and may derive an internal size classification. The customer is not required to estimate Small, Medium, or Large.

5. Number of Workspace Users

The number of people who need to use the workspace is **required** because it directly affects desk quantity, seating requirements, spatial fit, and the overall workspace composition. For the MVP, the customer-facing choices are **1 / 2 / 3+ users**.

6. Photos and Floor Plan

Room photos and a floor plan or layout are **optional**. They may improve spatial understanding and recommendation accuracy when supplied, but their absence must not block the customer journey.

7. Style Preference

Style preference must use the controlled structure defined in **AID-DATA-009 - Product Style Standard**. An AIDOOi-assisted or undecided option may be supported in the customer interface.

8. Colour Preference

Colour preference must use the controlled colour structure defined in **AID-DATA-007 - Product Colour Standard**, maintaining traceability between customer preference and canonical product data.

9. Budget Tier

Budget is collected using the common AIDOOi tier names: **Essential / Value / Standard / Premium / Luxury**. The monetary ranges applicable to the Home Office path are governed by **AID-LOG-001 - Budget & Price Matching Logic**.

10. Recommendation Handoff

After the required Home Office inputs are complete, AIDOOi proceeds to product matching and workspace composition. No additional Home Office-specific questions are required by this standard.

11. Lean Input Principle

Additional Home Office-specific questions should not be introduced unless MVP testing demonstrates that they materially improve recommendation quality.
