Villa Path Standard

AID-SPC-008 | Revision 2

Revision 2 change: Adds conditional Same Products / Different Products preferences for repeated Bedrooms, Living Areas, and Dining Areas, and aligns Total Villa Budget with AID-LOG-008.

1. Purpose

This standard defines the complete customer journey after Villa is selected in AID-SPC-001. The Villa path acts as an orchestration layer, reusing existing room modules while adding floor assignment, support for multiple living and dining areas, and customer control over repeated-space product consistency.

2. Entry Condition

Trigger: Customer selects Villa in the Step 1 question, What are you furnishing? The selected path represents furnishing the villa as a whole.

3. Villa Customer Path

Step	Input / Module	Requirement / Reference
1	Number of Floors	Required
2	Number of Bedrooms	Required
3	Bedroom 1...X	Repeat Bedroom module - Ref: AID-SPC-003; record Floor
4	Bedroom Consistency Preference	Conditional - only if 2+ Bedrooms - Same Products / Different Products
5	Number of Living Areas	Required
6	Living Area 1...X	Repeat Living Room module - Ref: AID-SPC-002; record Floor
7	Living Area Consistency Preference	Conditional - only if 2+ Living Areas - Same Products / Different Products
8	Number of Dining Areas	Required
9	Dining Area 1...X	Repeat Dining Room module - Ref: AID-SPC-004; record Floor
10	Dining Area Consistency Preference	Conditional - only if 2+ Dining Areas - Same Products / Different Products
11	Do you need a Home Office?	Required - Yes / No
11A	Home Office	Conditional - if Yes - Ref: AID-SPC-005; record Floor
12	Overall Style Preference	Project-level - Ref: AID-DATA-009
13	Overall Colour Preference	Project-level - Ref: AID-DATA-007
14	Total Villa Budget	Project-level - Ref: AID-LOG-008
15	Whole Villa Recommendation	Proceed to coordinated villa recommendation

4. Floor Structure

Number of Floors is required. Each Bedroom, Living Area, Dining Area, and conditional Home Office must be assigned to its relevant floor. Floor assignment provides structural context for the whole-villa project and supports later floor-plan, visualization, and presentation logic.

5. Bedroom Modules

Number of Bedrooms is required. A Bedroom module is created for each bedroom using the room-specific inputs defined in AID-SPC-003. The interface should show progress such as Bedroom 1 of 4. Each bedroom must also record its floor.

6. Bedroom Consistency Preference

If the villa contains two or more bedrooms, ask: How would you like the bedrooms to be furnished?

Option	System Behaviour
Same Products	Use the same furniture products across bedrooms where room dimensions, Preferred Bed Size, fit and availability allow.
Different Products	Allow different products while maintaining the villa's Overall Style, Overall Colour Direction and design coherence.

7. Living Area Modules

Number of Living Areas is required because a villa may contain more than one living space. A Living Room module is repeated for each living area using AID-SPC-002, with progress such as Living Area 1 of 2. Each living area must record its floor.

8. Living Area Consistency Preference

If the villa contains two or more living areas, ask: How would you like the living areas to be furnished?

Option	System Behaviour
Same Products	Use the same furniture products across living areas where dimensions, composition, fit and availability allow.
Different Products	Allow different products while maintaining the villa's Overall Style, Overall Colour Direction and design coherence.

9. Dining Area Modules

Number of Dining Areas is required. A Dining Room module is repeated for each dining area using AID-SPC-004, including its required Dining Capacity input. Each dining area must record its floor.

10. Dining Area Consistency Preference

If the villa contains two or more dining areas, ask: How would you like the dining areas to be furnished?

Option	System Behaviour
Same Products	Use the same furniture products across dining areas where Dining Capacity, dimensions, fit and availability allow.
Different Products	Allow different products while maintaining the villa's Overall Style, Overall Colour Direction and design coherence.

> **Shared Consistency Rule: Same Products is a preference, not a fit override. AIDOOi must never compromise room fit, circulation, Preferred Bed Size, Dining Capacity, or other functional requirements merely to repeat identical products. Detailed behaviour is governed by AID-LOG-008.**

11. Home Office Branch

AIDOOi asks Do you need a Home Office? with Yes / No options. If Yes, the Home Office module defined in AID-SPC-005 is executed and its floor is recorded. If No, the path continues to project-level preferences.

12. No Total Villa Area Requirement

Total villa area is not required. Product-fit dimensions are collected within each relevant room module. This avoids redundant input while retaining the spatial information required for recommendation.

13. Shared Project Preferences

Overall Style, Overall Colour, and Total Villa Budget are collected once at project level. Style follows AID-DATA-009, Colour follows AID-DATA-007, and Villa Project Budget logic follows AID-LOG-008.

14. Module Override Rule

When the Bedroom, Living Room, Dining Room, or Home Office standards are invoked from the Villa path, their room-specific spatial and practical inputs are reused, but their standalone Style, Colour, and Budget steps are not asked again. AID-SPC-008 controls those shared preferences for the villa as a whole.

15. Recommendation Handoff

After all required room modules, floor assignments, applicable repeated-space preferences, and shared project preferences are complete, AIDOOi proceeds to a coordinated Whole Villa Recommendation. The villa must be treated as one coherent furnishing project while preserving the identity, fit and functional requirements of each individual space.

16. MVP Scope Principle

> **Do not add villa-level questions unless they materially improve furniture matching, spatial fit, visualization, or purchasing. Bathrooms, kitchens, parking, land area, balconies, and similar non-core inputs are outside this MVP path unless later evidence justifies their inclusion.**
