Individual Product Path Standard

AID-SPC-009

1. Purpose

This standard defines the customer journey after Individual Product is selected in AID-SPC-001. The path is intentionally lean: the customer first selects a product category, and AIDOOi then activates the relevant category taxonomy and practical attributes already defined in the corresponding AID-CAT standard.

2. Entry Condition

Trigger: Customer selects **Individual Product** in the Step 1 question, *What are you furnishing?*.

3. Individual Product Customer Path

Step	Input / Action	Requirement / Reference
1	Select Product Category	Required
2	Category-Specific Product Inputs	Run relevant AID-CAT standard
3	Style Preference	Ref: AID-DATA-009
4	Colour Preference	Ref: AID-DATA-007
5	Budget Tier	Ref: AID-LOG-001
6	Product Recommendation	Proceed to matching and product results

4. Product Category Selection

The first required input is the product category. The customer-facing categories map directly to the existing AIDOOi category standards:

Customer Category	Category Standard
Chair / Seating	AID-CAT-001 - Seating
Sofa	AID-CAT-002 - Sofas
Table	AID-CAT-003 - Tables
Bed	AID-CAT-004 - Beds
Storage & Casegoods	AID-CAT-005 - Storage & Casegoods
Lighting	AID-CAT-006 - Lighting
Rug & Soft Furnishings	AID-CAT-007 - Rugs & Soft Furnishings
Decor & Accessories	AID-CAT-008 - Decor & Accessories

5. Category-Specific Logic

AID-SPC-009 must **not redefine** product-specific questions. After the customer selects a category, the system activates only the relevant taxonomy and required practical attributes from that category's AID-CAT standard. For example, Bed uses AID-CAT-004, while Table uses AID-CAT-003.

6. Shared Preferences

After the required category-specific inputs are complete, Style Preference follows **AID-DATA-009**, Colour Preference follows **AID-DATA-007**, and Budget Tier follows **AID-LOG-001**.

7. Recommendation Handoff

AIDOOi then proceeds directly to matching and **Individual Product Recommendation**, using the selected category, its required practical attributes, style, colour, budget, and available product data.

8. Lean Path Principle

The Individual Product path is a gateway to existing product-category intelligence. It must remain short and must not duplicate category definitions or introduce unrelated room-design questions.
