AID-DATA-001

PRODUCT NAME STANDARD

Naming rules for stable, concise and AI-ready product records

1. Purpose

This standard defines how Product Name must be created and stored in AIDOOi. Product Name is a stable product-identification field, not a container for colour, price, seller information or other structured attributes.

2. Core Rule

Use the official product/model name when a reliable official name exists. If no official name exists, AIDOOi creates a short, standardized and descriptive name based on the product's distinguishing form or type.

3. Naming Priority

Priority	Rule	Example
1	Use verified official product/model name.	Luna Lounge Chair
2	If no official name exists, create a short standardized descriptive name.	Sling Lounge Chair
3	Use a neutral Product Type only when no useful distinguishing feature is available.	Lounge Chair

4. Brand Must Be Stored Separately

Brand should normally not be embedded in the Product Name because Brand has its own controlled field under AID-DATA-003. The interface may combine Brand + Product Name for display without changing the stored Product Name.

Field	Stored Value	Possible UI Display
Brand	Raso	Raso - Luna Lounge Chair
Product Name	Luna Lounge Chair	Raso - Luna Lounge Chair

5. Variant Attributes Must Not Change Product Name

Variants of the same underlying model keep the same Product Name. Colour, fabric, finish, size or orientation are stored in structured variant attributes.

Product ID	Product Name	Variant Attribute
AID-00000001	Luna Lounge Chair	Primary Colour = Brown
AID-00000002	Luna Lounge Chair	Primary Colour = Beige
AID-00000003	Luna Lounge Chair	Primary Colour = Black

6. What Must Not Be Put in Product Name

Do Not Encode	Reason
Colour / Finish	Stored as structured attributes.
Material details	Stored in Material Family / Specific Material.
Style	Stored in Primary / Secondary Style.
Price / Discount	Commercial Offer data.
Seller / Showroom	Offer/location data.

Do Not Encode	Reason
Stock Status	Dynamic Offer data.
Seller SKU	External seller reference; separate field.
Long marketing description	Belongs in Product Description.

7. Good vs Poor Examples

Recommended	Avoid
Sling Lounge Chair	Brown Contemporary Leather & Fabric Lounge Chair with Metal Frame
Round Coffee Table	Beige Luxury Modern Round Coffee Table AED 1,950
3-Drawer Nightstand	Walnut Bedroom Nightstand with Three Drawers - Blossom Home

8. Stability Rule

Product Name does not change because of Seller, price, discount, stock, showroom location or other commercial changes. If a verified official model name is later discovered for a previously AIDOOi-generated descriptive name, the record may be reviewed and normalized under controlled data-governance procedures.

9. AI and Recommendation Rule

AIDOOi AI must use Product Name as one useful semantic signal, but recommendation logic must rely primarily on structured taxonomy and attributes. Product Name must not replace Product Type, Colour, Material, Style, Dimensions or other dedicated fields.

10. Example - AIDOOi Test Chair

Situation	Product Name
Verified official model name exists	Use the verified official model name, e.g. Luna Lounge Chair.
No official model name can be verified	Use AIDOOi standardized descriptive name: Sling Lounge Chair.
Seller SKU only is available	Do not use RASO_D-6604 as Product Name.

11. Final Standard

Official name available -> use it.
No official name -> create a short standardized descriptive name.
Keep Brand, Variant, Seller, SKU, Price, Stock and other attributes in their dedicated fields.
Keep Product Name concise, stable and human-readable.

Numbering Note

AID-DATA-001 is reassigned to Product Name Standard because the former Product ID standard has been superseded by AID-DATA-005.
