AID-DATA-003 | REVISION 1

BRAND DATA STANDARD

Aligned with AID-DATA-005 Product / Offer architecture

1. Purpose

Defines how Brand is captured, standardized and separated from Seller identity in AIDOOi. Brand is part of Product identity; Seller is part of the commercial Offer layer.

2. Core Rule

Brand = the commercial brand under which the product is manufactured, marketed or officially offered.
Seller = the retailer, showroom, marketplace seller or commercial entity offering that product for sale.

3. Product vs Offer Ownership

Data	Belongs To	Example
Brand	Product identity (AID)	Raso
Seller	Seller Offer (AIO)	Blossom Home
Seller SKU	Seller Offer (AIO)	RASO_D-6604
Price / Stock / Delivery	Seller Offer (AIO)	Seller-specific

4. Why Brand and Seller Must Stay Separate

The same canonical Product may be sold by several retailers. If Seller is stored as Brand, AIDOOi can create duplicate product identities and lose clean offer comparison.

5. Multi-Seller Example

Product ID	Brand	Offer ID	Seller	Seller SKU
AID-00000001	Raso	AIO-00000001	Blossom Home	RASO_D-6604
AID-00000001	Raso	AIO-00000002	Retailer B	CHAIR-BR-91
AID-00000001	Raso	AIO-00000003	Retailer C	LC-204-BR

All three offers point to the same Product. Brand remains Raso; only seller-specific Offer data changes.

6. When Seller and Brand Are the Same

Situation	Brand	Seller
Blossom Home sells a Raso product	Raso	Blossom Home
Blossom Home sells a genuine own-brand product	Blossom Home	Blossom Home

7. Unknown or Unverified Brand

If no brand can be reliably verified from the product, supplier documentation, packaging, official catalog or manufacturer information, use **Unbranded**. Do not guess or substitute the Seller name.

AID-DATA-003 | REVISION 1

BRAND DATA STANDARD

8. Controlled Brand Master

Rule	Standard
Official naming	Use the brand's official commercial name.
Capitalization	Use one approved standardized spelling/capitalization.
Duplicates	Do not create duplicates for spelling, spacing or capitalization variations.
Aliases	Keep one canonical Brand value; aliases may be reference metadata.
Verification	Use reliable product or supplier evidence before adding a new Brand.
Unknown brand	Use Unbranded rather than guessing.

9. Correct vs Incorrect Entry

Scenario	Correct	Incorrect
Raso product sold by Blossom Home	Brand = Raso; Seller = Blossom Home	Brand = Blossom Home
No verifiable brand	Brand = Unbranded	Guessing a likely brand
Blossom Home own-label product	Brand = Blossom Home; Seller = Blossom Home	Brand = Unbranded
Same Raso chair sold by another retailer	Keep Brand = Raso; create another AIO Offer	Create a new Product because seller changed

10. Brand and Parent / Variant Relationships

Variants under the same Parent will normally share the same Brand. Colour, fabric, finish, size or orientation normally do not change Brand. If the apparent same design is actually marketed under a different independent brand/model identity, review it before merging into one family.

11. AI and Recommendation Rule

AIDOOi AI may use Brand as a structured preference, trust, filtering or recommendation feature. Brand must never be inferred from Seller, Seller SKU or Product ID; the Brand field is the source of truth.

12. Example - AIDOOi Test Chair

Field	Value
Product ID	AID-00000001
Parent Product ID	AIP-00000001 (if verified variants exist)
Brand	Raso - only if verified
Seller Offer ID	AIO-00000001
Seller	Blossom Home
Seller SKU	RASO_D-6604

If Raso cannot be reliably verified, the correct Brand value is **Unbranded** until verification is obtained.

13. Relationship to AID-DATA-005

AID-DATA-003 controls Brand data quality and Brand/Seller separation. AID-DATA-005 controls identifier architecture: **AID** identifies the Product and **AIO** identifies the Seller Offer.

14. Final Principle

Brand answers: Who is this product commercially branded as?
Seller answers: Who is offering this product for sale?
They may sometimes be the same company, but they are different data concepts and must remain separate fields.

Revision Note

Revision 1 preserves the original Brand rules and adds explicit alignment with the AID-DATA-005 Product / Seller Offer architecture.
