AID-DATA-007

PRODUCT COLOUR STANDARD

Controlled colour data for consistent filtering, AI matching and product presentation

1. Purpose

Defines how colour is captured and normalized in AIDOOi while preserving useful seller/manufacturer detail and maintaining a controlled vocabulary for filtering and AI recommendation.

2. Core Colour Fields

Field	Requirement	Purpose
Primary Colour	Required	Dominant standardized colour family.
Secondary Colour	Conditional	Second visually significant standardized colour family.
Specific Colour	Recommended when available	Precise seller/manufacturer colour name such as Cognac, Camel or Sage.

3. Core Rule

Primary Colour and Secondary Colour must use AIDOOi's controlled vocabulary. Specific Colour preserves detailed terminology without fragmenting standardized filtering.

4. Controlled Colour Vocabulary

Family	Typical Specific Colour Examples
White	Ivory, Off-White, Cream White
Black	Jet Black, Charcoal Black
Grey	Light Grey, Charcoal, Graphite
Beige	Cream, Sand, Taupe, Ecru
Brown	Cognac, Camel, Chocolate, Mocha
Green	Sage, Olive, Forest Green, Emerald
Blue	Navy, Sky Blue, Teal, Cobalt
Red	Burgundy, Wine, Crimson
Orange	Terracotta, Burnt Orange
Yellow	Mustard, Ochre
Pink	Blush, Rose, Dusty Pink
Purple	Lavender, Plum
Gold	Champagne Gold, Antique Gold
Silver	Chrome, Brushed Silver
Brass	Antique Brass, Brushed Brass
Bronze	Antique Bronze, Copper-Bronze
Natural	Natural wood/fibre tone when no conventional family is more appropriate
Multicolour	Several visually important colours with no reasonable single dominant family

5. Primary / Secondary Colour

Primary Colour is the visually dominant colour family of the product as a whole. Secondary Colour is recorded only when a second colour is visually meaningful. Minor hardware, stitching, logos or negligible accents should not automatically create a Secondary Colour.

6. Specific Colour

Specific Colour preserves a useful detailed colour name supplied by the manufacturer/seller or confirmed during curation. It never replaces Primary Colour.

Specific Colour	Primary Colour
Cognac / Camel	Brown
Sage	Green
Ivory	White
Navy	Blue
Antique Brass	Brass

AID-DATA-007

PRODUCT COLOUR STANDARD

7. Multicolour Products

Use Multicolour as Primary Colour only when several colours are visually important and selecting one dominant family would be misleading. If one colour clearly dominates and another is secondary, use those standard families instead.

8. Variant Relationship

Colour may define a selectable Product Variant under the same Parent Product. Each canonical colour variant receives its own AID Product ID while retaining the same Product Name and Parent where the underlying model is unchanged.

Product ID	Product Name	Primary	Specific
AID-00000001	Luna Lounge Chair	Brown	Cognac
AID-00000002	Luna Lounge Chair	Beige	Sand
AID-00000003	Luna Lounge Chair	Black	Jet Black

9. Seller Colour vs Canonical Colour

Seller terminology must not expand the controlled Primary/Secondary vocabulary. A seller value such as Cappuccino can be retained as Specific Colour while being normalized to the most appropriate standard family.

10. Example - AIDOOi Test Lounge Chair

Field	Recommended Value
Primary Colour	Brown
Secondary Colour	Black / White pattern only if visually significant under structured colour handling
Specific Colour	Cognac or seller-confirmed equivalent, only if verified
Metal finish colour	Bronze / Brass family according to verified finish data; material/finish attributes remain separate

11. Data Quality Rules

Rule	Standard
Do not guess	If colour cannot be reliably determined, flag for review rather than inventing a precise value.
Use controlled families	Primary and Secondary Colour must come from the approved vocabulary.
Preserve useful detail	Keep seller/manufacturer terminology in Specific Colour when available.
Avoid over-tagging	Do not record every minor accent as Secondary Colour.
Separate colour from material	Walnut, oak, leather and velvet are not automatically colour values; use material/finish fields where appropriate.

12. AI and Filtering Rule

AIDOOi should primarily use standardized Primary and Secondary Colour families for preference matching and filtering. Specific Colour can provide finer semantic context but must not fragment the controlled vocabulary.

13. Final Standard

Primary Colour: required controlled family.
Secondary Colour: conditional controlled family.
Specific Colour: recommended detailed name when available.
Seller terminology: preserved but normalized.
AI/filtering: driven primarily by controlled colour families.
