AID-CAT-001 | REVISION 1

SEATING STANDARD

Classification taxonomy and practical AI-matching attributes for Seating in AIDOOi

1. Scope

This standard defines the approved classification structure and category-specific practical attributes for products whose primary function is seating. It follows the lean three-level AIDOOi taxonomy defined in AID-DATA-004. Universal fields such as overall dimensions, colour, material, style, price, availability and images remain governed by their respective AID-DATA standards.

2. Classification Structure

Main Category: Seating

Category	Approved Subcategory / Product Type
Chair	Dining Chair; Lounge Chair; Office Chair; Rocking Chair; Recliner
Stool	Bar Stool; Counter Stool; Low Stool
Bench	Dining Bench; Entryway Bench; Bedroom Bench
Ottoman / Pouf	Ottoman; Pouf
Chaise	Chaise Lounge

3. Category Definitions

Category	Working Definition
Chair	Primarily single-person seating with a backrest. Product Type identifies its principal seating function.
Stool	Compact seating, generally higher or simpler than a chair and commonly used at counters, bars or as occasional seating.
Bench	Elongated seating intended for one or more people; classified by its principal placement or use.
Ottoman / Pouf	Low upholstered seating or foot-support furniture without the conventional structure of a chair.
Chaise	Elongated seating designed to support a semi-reclined or extended-leg sitting position.

4. Chair Product Types

Product Type	Use
Dining Chair	Chair primarily intended for dining-table seating.
Lounge Chair	Comfort-oriented single-person chair intended for relaxed seating.
Office Chair	Chair primarily intended for desk or work use.
Rocking Chair	Chair whose primary seating function includes a rocking motion.
Recliner	Chair designed to support a reclined seating position through its principal function or mechanism.

5. Stool, Bench, Ottoman / Pouf and Chaise Types

Product Type	Classification Note
Bar Stool	Stool intended for bar-height surfaces.
Counter Stool	Stool intended for counter-height surfaces.
Low Stool	Low or general-purpose stool not primarily intended for bar/counter height.
Dining Bench	Bench primarily intended for dining seating.
Entryway Bench	Bench primarily intended for entrance or hallway use.
Bedroom Bench	Bench primarily intended for bedroom placement, including end-of-bed use.
Ottoman	Low upholstered piece commonly used as seating and/or foot support.
Pouf	Compact soft or upholstered low seating form.
Chaise Lounge	Elongated chair-like seating for relaxed, extended-leg positioning.

AID-CAT-001 | REVISION 1

SEATING STANDARD

6. What Must Stay Outside the Taxonomy

Terms describing appearance, construction or secondary functionality should not automatically become additional Seating categories. Examples include Armchair, Accent Chair, Wingback, Club Chair, Barrel Chair, Swivel, Sling and similar descriptors. Where useful to matching or filtering, these are captured as attributes rather than creating additional taxonomy branches.

7. Classification Rule

Classify by the product's primary seating identity and principal function. Do not create multiple taxonomy classifications merely because a product has additional design features or secondary uses.

8. Seating Practical Attributes - MVP

The following category-specific attributes support practical AI matching. They complement, but do not duplicate, universal AID-DATA fields.

Attribute	Requirement	Controlled / Data Rule	Primary Matching Use
Seating Capacity	Required	Positive whole number	Number of users supported.
Armrests	Required	Yes / No	Comfort, use preference and fit.
Seat Height	Recommended	cm	Dining/work compatibility and ergonomics.
Usable Seat Depth	Recommended	cm	Seating posture and comfort profile.
Usable Seat Width	Recommended	cm	Usable personal seating space.
Back Type / Height	Recommended	Low / Mid / High	Support preference and visual/functional fit.
Swivel	Required	Yes / No	Functional preference.
Reclining	Required	Yes / No	Functional preference.
Rocking	Required	Yes / No	Functional preference.
Stackable	Conditional	Yes / No	Space-saving relevance where applicable.
Seat Construction	Recommended	e.g. Upholstered / Sling / Solid / Woven	Construction and practical seating character.
Upholstered	Required	Yes / No	Comfort, maintenance and material relevance.
Adjustable Height	Conditional	Yes / No	Primarily Office Chair / Stool use.
Footrest	Conditional	Yes / No	Primarily Stool and relevant seating use.

9. Attribute Application Rules

Rule	Standard
Required attributes	Must be completed for active Seating products unless genuinely not applicable by system design.
Recommended attributes	Capture when reliably known; do not guess missing measurements or characteristics.
Conditional attributes	Required only when relevant to the Product Type or feature context.
Universal attributes	Do not duplicate Style, Material, Colour, Overall W/D/H, Price, Availability or Images here.
Unknown information	Leave unresolved rather than inferring from marketing language or unclear imagery.

10. Measurement Relationship

Overall Width, Depth and Height remain governed by AID-DATA-006. Seating-specific measurements such as Seat Height, Usable Seat Depth and Usable Seat Width are category attributes. Where supplied, they should use centimetres and follow the same practical measurement discipline as the universal dimensions standard.

11. Example - AIDOOi Test Lounge Chair

Field	Value
Main Category	Seating
Category	Chair
Product Type	Lounge Chair
Seating Capacity	1
Armrests	Yes
Seat Height	40 cm
Usable Seat Depth	53 cm
Usable Seat Width	63 cm

Field	Value
Back Type / Height	Low
Swivel	No
Reclining	No
Rocking	No
Seat Construction	Sling
Upholstered	Yes
Style	Contemporary - governed by AID-DATA-009

12. Expansion Rule

New Seating Product Types or practical attributes should be added only when recurring real product data demonstrates that the existing structure cannot classify or match products accurately and the addition materially improves search, matching, filtering or purchasing. Avoid taxonomy or attribute expansion only to capture decorative differences.

13. Final Rule

For Seating, keep classification functional and lean: Seating -> Category -> Product Type. Store visual, structural and secondary-use differences as controlled attributes whenever possible. Practical attributes should exist because they materially improve AIDOOi matching or customer decision-making, not merely because the data could be collected.
