AID-CAT-002 | REVISION 1

SOFAS STANDARD

Classification taxonomy and practical AI-matching attributes for Sofas in AIDOOi

1. Scope

This standard defines the approved classification structure and category-specific practical attributes for sofa products in AIDOOi. It follows the lean three-level taxonomy established in AID-DATA-004 and keeps capacity, configuration, orientation and secondary features outside the core taxonomy.

2. Classification Structure

Main Category: Sofas

Category	Approved Subcategory / Product Type
Sofa	Standard Sofa
Sectional Sofa	Sectional Sofa
Modular Sofa	Modular Sofa
Sofa Bed	Sofa Bed

3. Category Definitions

Category	Working Definition
Sofa	Conventional multi-person upholstered seating that is not primarily sectional, modular or convertible into a bed.
Sectional Sofa	Multi-section sofa designed as a defined sectional arrangement, commonly configured in angled or extended layouts.
Modular Sofa	Sofa composed of modules designed to be combined, rearranged or expanded as part of the product's core system.
Sofa Bed	Sofa whose primary product design includes conversion or transformation into a sleeping surface.

4. Keep Capacity Outside the Taxonomy

Do not create separate Product Types for 2-Seater, 3-Seater, 4-Seater or larger sofas. Store this information in the dedicated **Seating Capacity** attribute.

Taxonomy	Attribute
Sofas -> Sofa -> Standard Sofa	Seating Capacity = 2
Sofas -> Sofa -> Standard Sofa	Seating Capacity = 3
Sofas -> Sectional Sofa -> Sectional Sofa	Seating Capacity = 5

5. Configuration and Orientation Are Attributes

Information	Store As	Examples
Configuration / Shape	Attribute	Straight; L-Shaped; U-Shaped; Curved
Orientation	Attribute	Left-facing; Right-facing; Reversible; Not Applicable
Seating Capacity	Attribute	2; 3; 4; 5; etc.
Reclining	Attribute	Yes / No

6. What Must Stay Outside the Taxonomy

Descriptive or stylistic terms such as Deep-seat, Low-back, Tufted, Chesterfield, Tuxedo, Curved, Reclining and similar characteristics should not automatically create new sofa categories. Where they materially improve matching or filtering, store them as attributes.

7. Sectional vs Modular Rule

Sectional describes a sofa designed as a multi-section seating arrangement. Modular should be used when reconfigurability or module-based construction is a core characteristic of the product system. Classify according to primary commercial and structural identity rather than every feature the product possesses.

SOFAS STANDARD

8. Sofa Practical Attributes - MVP

These category-specific attributes support AI matching and customer decision-making. Universal Style, Material, Colour, overall W/D/H, Price, Availability and Images remain governed by their AID-DATA standards.

Attribute	Requirement	Controlled / Data Rule	Primary Matching Use
Seating Capacity	Required	Positive whole number	Household/use capacity.
Configuration / Shape	Required	Straight / L-Shaped / U-Shaped / Curved	Room layout and space fit.
Orientation	Conditional	Left-facing / Right-facing / Reversible / N/A	Sectional/chaise placement fit.
Modular	Required	Yes / No	Reconfiguration and flexibility.
Convertible / Sofa Bed	Required	Yes / No	Sleeping function and studio use.
Storage	Required	Yes / No	Space-saving and storage needs.
Reclining	Required	Yes / No	Functional preference.
Seat Depth	Recommended	cm	Relaxed vs upright seating fit.
Seat Height	Recommended	cm	Comfort and practical use.
Back Type / Height	Recommended	Low / Mid / High	Support and seating preference.
Firmness	Recommended	Soft / Medium / Firm	Comfort preference when reliably known.
Removable Covers	Recommended	Yes / No / Unknown	Maintenance and household suitability.
Washable Covers	Recommended	Yes / No / Unknown	Maintenance and household suitability.

9. Attribute Application Rules

Rule	Standard
Required	Must be completed for active Sofa products unless a controlled Not Applicable value is appropriate.
Recommended	Capture when reliably known; missing information must not be guessed.
Conditional	Required only when relevant to configuration or product functionality.
Firmness	Use only when seller/manufacturer data or reliable assessment supports it; do not infer from appearance.
Universal fields	Do not duplicate Style, Material, Colour, overall dimensions, Price, Availability or Images.

10. Sofa Bed and Storage Rules

A Sofa Bed Product Type must have **Convertible / Sofa Bed = Yes**. Standard, Sectional or Modular sofas may only use Convertible = Yes when sleeping conversion is a verified secondary function. Storage should describe integrated usable storage within the sofa system, not nearby or separate furniture.

11. Orientation Rule

Orientation is meaningful when a chaise, return or asymmetric section creates a left/right placement constraint. Straight or symmetric products should use Not Applicable where appropriate. Reversible should be used only when the product is genuinely designed to switch orientation.

12. Classification Examples

Product Description	Classification	Key Attributes
Conventional three-seat sofa	Sofas -> Sofa -> Standard Sofa	Capacity = 3; Configuration = Straight
Five-seat L-shaped sectional	Sofas -> Sectional Sofa -> Sectional Sofa	Capacity = 5; Configuration = L-Shaped; Orientation as applicable
Reconfigurable module-based sofa	Sofas -> Modular Sofa -> Modular Sofa	Modular = Yes; Configuration as applicable
Convertible two-seat sleeper	Sofas -> Sofa Bed -> Sofa Bed	Capacity = 2; Convertible = Yes

13. Expansion Rule

Add a new Sofa Product Type or practical attribute only when recurring real product data cannot be represented accurately within the approved structure and the addition materially improves AIDOOi search, matching, filtering or purchasing. Decorative differences alone are not sufficient.

14. Final Rule

Keep the Sofa taxonomy focused on fundamental product identity. Capacity, configuration, orientation, style and secondary functions belong in structured attributes rather than additional taxonomy branches. Practical attributes should remain lean and directly useful to matching or customer decisions.
