AID-CAT-003 | REVISION 1

TABLES STANDARD

Classification taxonomy and practical AI-matching attributes for Tables in AIDOOi

1. Scope

This standard defines the approved classification structure and category-specific practical attributes for table products in AIDOOi. It follows the lean three-level taxonomy established in AID-DATA-004 and keeps shape, dimensions, material, capacity and secondary features outside the core taxonomy.

2. Classification Structure

Main Category: Tables

Category	Approved Subcategory / Product Type
Living Room Table	Coffee Table; Side Table; Nesting Table
Dining Table	Dining Table
Console Table	Console Table
Desk	Desk
Dressing Table	Dressing Table / Vanity
Bar Table	Bar Table

3. Product Type Definitions

Product Type	Working Definition
Coffee Table	Low table primarily intended for placement in front of or within a living-room seating arrangement.
Side Table	Compact table intended beside seating or as occasional surface furniture. End tables are classified here.
Nesting Table	Set or system of tables designed to fit partly or fully beneath one another.
Dining Table	Table whose primary function is dining.
Console Table	Relatively narrow table primarily intended against a wall, behind seating or in an entryway.
Desk	Table whose primary function is work, study or computer use.
Dressing Table / Vanity	Table primarily intended for personal grooming, dressing or vanity use.
Bar Table	Elevated table primarily intended for bar-height seating or standing use.

4. Keep Shape and Dimensions Outside the Taxonomy

Information	Store As	Examples
Shape	Attribute	Round; Oval; Square; Rectangular; Organic
Width / Depth / Height	Universal Dimensions	Numeric measurements under AID-DATA-006
Extendable	Attribute	Yes / No
Seating Capacity	Attribute	2; 4; 6; 8; etc.
Material	Universal Material	Governed by AID-DATA-008
Storage / Drawers	Attribute	Yes / No; quantity if useful
Style	Universal Style	Governed by AID-DATA-009

5. End Table and C-Table Rule

End Table is classified as Side Table because its core function is equivalent. C-Table should also normally be classified as Side Table, with its C-shaped form stored as a design/form attribute if that information materially improves matching or filtering.

6. Extendable Dining Tables

An extendable dining table remains Tables -> Dining Table -> Dining Table. Extendability is a product feature, not a separate taxonomy branch. Store Extendable = Yes and capture closed/open dimensions where useful.

7. Classification Rule

Classify a table by its primary functional identity. Do not create new taxonomy branches for shape, material, dimensions, style, storage, extendability or decorative form when those can be represented as structured attributes.

AID-CAT-003 | REVISION 1

TABLES STANDARD

8. Table Practical Attributes - MVP

These category-specific attributes support room fit, functional matching and customer decision-making. Universal product data remains governed by the relevant AID-DATA standards.

Attribute	Requirement	Controlled / Data Rule	Primary Matching Use
Shape	Required	Round / Oval / Square / Rectangular / Organic / Other verified	Room layout, circulation and visual fit.
Extendable	Required	Yes / No	Flexible dining/work capacity.
Seating Capacity	Conditional	Positive whole number	Dining and Bar Table capacity.
Extended Seating Capacity	Conditional	Positive whole number	Capacity when an extendable table is fully opened.
Closed Dimensions	Conditional	cm	Space fit for extendable tables in normal state.
Extended Dimensions	Conditional	cm	Space fit when fully extended.
Storage	Required	Yes / No	Functional storage need.
Drawer Quantity	Conditional	Whole number	Desk, console and vanity storage utility.
Adjustable Height	Conditional	Yes / No	Desk/bar/other functional flexibility.
Nesting Set Quantity	Conditional	Whole number	Number of tables in a Nesting Table set.
Form Feature	Recommended	e.g. C-Shaped	Useful special form without creating taxonomy branches.

9. Attribute Application Rules

Rule	Standard
Required	Complete for active Table products unless a controlled Not Applicable treatment is appropriate.
Conditional	Required only when the product type or verified feature makes the field relevant.
Recommended	Capture when reliably known and materially useful; do not guess.
Dimensions	Overall W/D/H stay under AID-DATA-006. Closed/extended dimensions are additional state-specific measurements.
Universal fields	Do not duplicate Material, Style, Colour, Price, Availability or Images in this category standard.

10. Shape Rule

Shape describes the usable overall tabletop form rather than decorative edge detail. Use the closest controlled value. Organic should be used for intentionally irregular free-form shapes. A special form such as C-Shaped may be captured separately as Form Feature when useful.

11. Capacity Rule

Seating Capacity is required only where the table is intended to accommodate seated users, principally Dining Tables and relevant Bar Tables. Coffee, Side, Console, Desk and Dressing Tables should not be assigned an artificial seating capacity merely because a chair could physically be placed near them.

12. Extendable Table Rule

When Extendable = Yes, capture closed and extended dimensions when reliably available. Extended Seating Capacity should be recorded when the extension changes the intended number of users. Do not create a new AID solely because the same physical table changes size through its built-in extension mechanism.

13. Classification Examples

Product Description	Classification	Key Attributes
Round marble coffee table	Tables -> Living Room Table -> Coffee Table	Shape = Round
C-shaped side table	Tables -> Living Room Table -> Side Table	Form Feature = C-Shaped
Six-person extendable dining table	Tables -> Dining Table -> Dining Table	Capacity = 6; Extendable = Yes; extended data as available
Wood console with drawers	Tables -> Console Table -> Console Table	Storage = Yes; Drawer Quantity as known
Home-office writing desk	Tables -> Desk -> Desk	Storage / Adjustable Height as applicable

14. Expansion Rule

Add a new Table Product Type or practical attribute only when recurring real product data cannot be represented accurately within the approved structure and the addition materially improves AIDOOi search, matching, filtering or purchasing. Decorative differences alone are not sufficient.

15. Final Rule

Keep the Tables taxonomy functional and lean: Tables -> Category -> Product Type. Store physical, visual and secondary functional differences as controlled attributes whenever possible. Category attributes should be retained only when they materially improve room fit, functionality or customer choice.
