AID-CAT-004 | REVISION 1

BEDS STANDARD

Classification taxonomy and practical AI-matching attributes for Beds in AIDOOi

1. Scope

This standard defines the approved classification structure and category-specific practical attributes for bed products in AIDOOi. It follows the lean three-level taxonomy established in AID-DATA-004 and keeps bed size, material, upholstery, storage and secondary features outside the core taxonomy.

2. Classification Structure

Main Category: Beds

Category	Approved Subcategory / Product Type
Bed	Standard Bed
Bunk Bed	Bunk Bed
Daybed	Daybed
Murphy Bed	Murphy Bed
Headboard	Headboard

3. Product Type Definitions

Product Type	Working Definition
Standard Bed	Conventional bed frame whose primary identity is not bunk, daybed or wall-folding construction.
Bunk Bed	Bed system with sleeping surfaces arranged vertically as its primary structural identity.
Daybed	Bed designed to function visually or practically as both a sleeping surface and daytime seating/resting piece.
Murphy Bed	Bed designed to fold or retract into a wall, cabinet or vertical storage structure as a core function.
Headboard	Standalone headboard product intended for use with a compatible bed or bed base.

4. Keep Bed Size Outside the Taxonomy

Do not create separate taxonomy branches for Single, Twin, Double, Queen, King or Super King. Store bed size in a dedicated **Bed Size** attribute. Market-specific size standards may be handled through structured mattress/sleeping-surface dimensions where required.

5. Features That Remain Attributes

Information	Store As	Examples
Bed Size	Attribute	Single; Twin; Double; Queen; King; Super King
Upholstered	Attribute	Yes / No
Storage	Attribute	Yes / No
Storage Type	Attribute	Drawers; Lift-up; other approved values
Adjustable	Attribute	Yes / No
Canopy	Attribute	Yes / No
Four-poster	Attribute	Yes / No
Material	Universal Material	Governed by AID-DATA-008
Style	Universal Style	Governed by AID-DATA-009

6. Upholstered and Storage Bed Rule

An upholstered or storage-equipped conventional bed remains Beds -> Bed -> Standard Bed. Upholstery and storage describe features of the product rather than a different fundamental product identity.

7. Mattress Exclusion

Mattresses are not included in AID-CAT-004. Mattress matching requires different attributes such as firmness, construction, thickness and sleep preferences. If mattresses are introduced, they should be governed by a separate category standard.

AID-CAT-004 | REVISION 1

BEDS STANDARD

8. Bed Practical Attributes - MVP

These category-specific attributes support room fit, sleeping compatibility, storage needs and functional matching. Universal product fields remain governed by the relevant AID-DATA standards.

Attribute	Requirement	Controlled / Data Rule	Primary Matching Use
Bed Size	Required	Single / Twin / Double / Queen / King / Super King / verified market value	Sleeping requirement and mattress compatibility.
Sleeping Surface Width	Recommended	cm	Exact mattress/sleeping compatibility across markets.
Sleeping Surface Length	Recommended	cm	Exact mattress/sleeping compatibility across markets.
Upholstered	Required	Yes / No	Maintenance, tactile and design preference.
Storage	Required	Yes / No	Space-saving and storage need.
Storage Type	Conditional	Drawers / Lift-up / Open / Other verified	Storage access and room-clearance fit.
Adjustable	Required	Yes / No	Functional flexibility when built into bed system.
Canopy	Required	Yes / No	Vertical-space and design consideration.
Four-poster	Required	Yes / No	Vertical-space and design consideration.
Headboard Included	Conditional	Yes / No	Purchase completeness for bed frames.
Headboard Height	Conditional	cm	Wall/visual fit when headboard is included or product is a Headboard.
Under-bed Clearance	Recommended	cm	Cleaning, storage and practical use.
Bunk Levels	Conditional	Positive whole number	Bunk Bed sleeping configuration.
Murphy Orientation	Conditional	Vertical / Horizontal	Wall-bed installation and room fit.

9. Attribute Application Rules

Rule	Standard
Required	Complete for active Bed products unless a controlled Not Applicable treatment is appropriate.
Conditional	Required only when relevant to the Product Type or verified feature.
Recommended	Capture when reliably known and useful; do not guess.
Bed Size	Use the seller/manufacturer's verified size label, supported by sleeping-surface dimensions when available.
Universal fields	Do not duplicate overall W/D/H, Material, Style, Colour, Price, Availability or Images here.

10. Bed Size and Market Compatibility

Named bed sizes vary between markets. Bed Size is useful for customer language, but exact Sleeping Surface Width and Length provide stronger compatibility data when available. AIDOOi should not assume that every Queen, King or other named size has identical dimensions across all markets.

11. Storage Rule

Storage = Yes only when usable storage is integrated into the bed. Storage Type should identify how the storage is accessed. Lift-up storage can materially affect room usability and clearance, while drawer storage may require lateral clearance; these differences are useful to room matching.

12. Bunk, Daybed and Murphy Rules

For Bunk Beds, capture Bunk Levels and relevant sleeping-surface data when known. Daybeds retain their Daybed taxonomy identity and may be matched for dual seating/sleeping use without creating a new taxonomy branch. For Murphy Beds, Murphy Orientation should be captured when verified because vertical and horizontal folding systems have different wall and room-fit implications.

13. Headboard Rule

A standalone Headboard remains Beds -> Headboard -> Headboard. Bed Size/compatibility and Headboard Height should be captured when known. Headboard products should not be assigned sleeping or storage features that belong to a complete bed frame.

14. Classification Examples

Product Description	Classification	Key Attributes
King upholstered bed	Beds -> Bed -> Standard Bed	Bed Size = King; Upholstered = Yes

Product Description	Classification	Key Attributes
Queen lift-up storage bed	Beds -> Bed -> Standard Bed	Bed Size = Queen; Storage = Yes; Storage Type = Lift-up
Two-level bunk bed	Beds -> Bunk Bed -> Bunk Bed	Bunk Levels = 2; size as applicable
Convertible-style daybed	Beds -> Daybed -> Daybed	Dual seating/sleeping use inherent to type
Wall-folding bed	Beds -> Murphy Bed -> Murphy Bed	Murphy Orientation as verified

15. Expansion Rule

Add a new Bed Product Type or practical attribute only when recurring real product data cannot be represented accurately within the approved structure and the addition materially improves AIDOOi search, matching, filtering or purchasing.

16. Final Rule

Keep the Beds taxonomy structural and lean: Beds -> Category -> Product Type. Store size, upholstery, storage and secondary functional differences as controlled attributes. Practical attributes should remain focused on sleeping compatibility, room fit and meaningful customer needs.
