AID-CAT-005 | REVISION 1

STORAGE & CASEGOODS STANDARD

Classification taxonomy and practical AI-matching attributes for Storage & Casegoods in AIDOOi

1. Scope

This standard defines the approved classification structure and category-specific practical attributes for Storage & Casegoods products in AIDOOi. Classification is based on the product's primary functional identity, while room suitability, materials, dimensions, doors, drawers and other features remain structured attributes.

2. Classification Structure

Main Category: Storage & Casegoods

Category	Approved Subcategory / Product Type
Cabinet	Storage Cabinet
Sideboard / Credenza	Sideboard / Credenza
Chest of Drawers	Chest of Drawers
Wardrobe	Wardrobe
TV Unit	TV Unit
Bookshelf / Shelving	Bookcase / Shelving Unit
Shoe Storage	Shoe Cabinet
Nightstand	Nightstand / Bedside Table

3. Product Type Definitions

Product Type	Working Definition
Storage Cabinet	General enclosed or mixed-storage cabinet not better classified as a more specific approved product type.
Sideboard / Credenza	Low or medium-height storage casegood commonly used in dining or living spaces for concealed and/or display storage.
Chest of Drawers	Storage furniture whose primary storage function is provided by stacked drawers.
Wardrobe	Tall storage furniture primarily intended for clothing and personal-item storage.
TV Unit	Furniture primarily designed to support, surround or provide storage for television/media equipment.
Bookcase / Shelving Unit	Furniture primarily designed around open or partially open shelving for books, display or general storage.
Shoe Cabinet	Storage furniture primarily designed for footwear.
Nightstand / Bedside Table	Compact bedside furniture primarily intended for immediate bedside support and storage.

4. Features That Remain Attributes

Information	Store As	Examples
Number of Doors	Attribute	0; 1; 2; 3; 4; etc.
Number of Drawers	Attribute	0; 1; 2; 3; etc.
Storage Format	Attribute	Open; Closed; Mixed
Wall Mounted	Attribute	Yes / No
Adjustable Shelves	Attribute	Yes / No
Material	Universal Material	Governed by AID-DATA-008
Dimensions	Universal Dimensions	Width; Depth; Height under AID-DATA-006
Style	Universal Style	Governed by AID-DATA-009
Suitable Room	Attribute	Living Room; Bedroom; Dining; Entryway; Office; etc.

5. Nightstand / Bedside Table Rule

A nightstand is classified within Storage & Casegoods, not as a generic Side Table. Although the name may include the word 'table', its primary functional identity is dedicated bedside support and storage. This distinction improves bedroom-specific matching and product discovery.

6. Room Is Not a Taxonomy Level

Do not create separate taxonomy branches such as Bedroom Cabinet, Living Room Cabinet or Office Cabinet solely because of room placement. Store room suitability separately. A product should be classified by what it fundamentally is, not only where it may be used.

AID-CAT-005 | REVISION 1

STORAGE & CASEGOODS STANDARD

7. Storage & Casegoods Practical Attributes - MVP

These category-specific attributes support storage-capacity matching, room fit, access clearance and practical customer needs. Universal product fields remain governed by the relevant AID-DATA standards.

Attribute	Requirement	Controlled / Data Rule	Primary Matching Use
Number of Doors	Required	Whole number, including 0	Storage access and configuration.
Number of Drawers	Required	Whole number, including 0	Storage organization and utility.
Storage Format	Required	Open / Closed / Mixed	Display vs concealed storage preference.
Number of Shelves	Recommended	Whole number, including 0	Storage/display capacity.
Adjustable Shelves	Conditional	Yes / No	Flexible storage configuration.
Wall Mounted	Required	Yes / No	Installation and floor-space use.
Door Type	Recommended	Hinged / Sliding / Flap / Other verified	Access clearance and room fit.
Internal Hanging Rail	Conditional	Yes / No	Wardrobe clothing-storage suitability.
Cable Management	Conditional	Yes / No	TV/media unit suitability.
TV Size Compatibility	Conditional	Maximum supported TV size when verified	TV Unit matching.
Shoe Capacity	Conditional	Positive whole number / verified range	Shoe Cabinet matching.
Suitable Room	Recommended	Controlled multi-select room values	Room-specific recommendation context.

8. Attribute Application Rules

Rule	Standard
Required	Complete for active Storage & Casegoods products unless a controlled Not Applicable treatment is appropriate.
Conditional	Required only when relevant to the Product Type or verified construction.
Recommended	Capture when reliably known and materially useful; do not guess.
Capacity claims	Use seller/manufacturer verified values where applicable; do not infer exact capacity from appearance.
Universal fields	Do not duplicate overall dimensions, Material, Style, Colour, Price, Availability or Images here.

9. Door and Drawer Rules

Door and drawer counts describe the usable product configuration. Door Type should be captured when it affects access clearance or room fit. Sliding doors can be particularly relevant in compact spaces because they do not require the same outward opening clearance as hinged doors.

10. Shelving Rule

Number of Shelves should describe usable shelf levels when reliably known. Adjustable Shelves = Yes only when the shelf position is intentionally user-adjustable. Open, Closed or Mixed Storage Format describes the overall storage character and should not be replaced by decorative descriptions.

11. Product-Specific Functional Attributes

Internal Hanging Rail applies primarily to Wardrobes. Cable Management and TV Size Compatibility apply to TV Units when verified. Shoe Capacity applies to Shoe Cabinets when the seller/manufacturer provides a credible capacity or range. These fields should remain Not Applicable for unrelated Product Types.

12. Classification Examples

Product Description	Classification	Key Attributes
3-door walnut wardrobe	Storage & Casegoods -> Wardrobe -> Wardrobe	Doors = 3; Hanging Rail as applicable; Room = Bedroom
Wall-mounted TV cabinet	Storage & Casegoods -> TV Unit -> TV Unit	Wall Mounted = Yes; Cable Management as applicable
Oak sideboard with 2 doors and 3 drawers	Storage & Casegoods -> Sideboard / Credenza -> Sideboard / Credenza	Doors = 2; Drawers = 3; Storage Format as verified
Open metal bookcase	Storage & Casegoods -> Bookshelf / Shelving -> Bookcase / Shelving Unit	Storage Format = Open; Shelf count as known
Two-drawer bedside table	Storage & Casegoods -> Nightstand -> Nightstand / Bedside Table	Drawers = 2; Room = Bedroom

13. Classification Rule

Classify by primary storage function and product identity. Do not create new taxonomy branches for room, material, number of doors, number of drawers, wall mounting, shelf adjustability or style when these can be represented as structured attributes.

14. Expansion Rule

Add a new Storage & Casegoods Product Type or practical attribute only when recurring real product data cannot be represented accurately within the approved structure and the addition materially improves AIDOOi search, matching, filtering or purchasing.

15. Final Rule

Keep Storage & Casegoods taxonomy functional and lean: Storage & Casegoods -> Category -> Product Type. Preserve room, construction and feature differences as controlled attributes whenever possible. Practical attributes should focus on storage utility, access, installation and room-fit decisions.
