AID-CAT-006 | REVISION 1

LIGHTING STANDARD

Classification taxonomy and practical AI-matching attributes for Lighting in AIDOOi

1. Scope

This standard defines the approved classification structure and category-specific practical attributes for lighting products in AIDOOi. Classification is based primarily on installation type and core lighting function. Form, finish, light source, technical specifications and room suitability remain structured attributes.

2. Classification Structure

Main Category: Lighting

Category	Approved Subcategory / Product Type
Ceiling Lighting	Pendant Light; Chandelier; Ceiling Light
Floor Lighting	Floor Lamp
Table Lighting	Table Lamp
Wall Lighting	Wall Light / Sconce

3. Product Type Definitions

Product Type	Working Definition
Pendant Light	Ceiling-mounted light suspended by cord, cable, rod or similar support, typically with one or a limited group of light elements.
Chandelier	Decorative ceiling-suspended fixture whose multi-arm, multi-light or statement composition is a core product identity.
Ceiling Light	Ceiling-mounted fixture that is not primarily classified as a pendant or chandelier, including close-to-ceiling formats.
Floor Lamp	Freestanding lighting product supported from the floor.
Table Lamp	Portable or freestanding compact lamp designed to sit on a table, desk, nightstand or similar surface.
Wall Light / Sconce	Lighting fixture designed to be mounted directly to a wall.

4. Features That Remain Attributes

Information	Store As	Examples
Light Source	Attribute	LED; Bulb; Integrated LED
Bulb Base	Attribute	E27; E14; GU10; etc.
Number of Lights	Attribute	1; 3; 5; etc.
Dimmable	Attribute	Yes / No
Color Temperature	Attribute	Warm; Neutral; Cool and/or Kelvin
Adjustable	Attribute	Yes / No
Material	Universal Material	Governed by AID-DATA-008
Finish	Structured finish data	Brass; Black; Chrome; Bronze; etc.
Style	Universal Style	Governed by AID-DATA-009
Dimensions	Universal Dimensions	Width; Depth; Height under AID-DATA-006
Cable / Drop Length	Dimension	Numeric measurement where applicable
Suitable Room	Attribute	Living Room; Dining; Bedroom; Office; etc.

5. Form and Use Descriptors

Terms such as Arc Lamp, Tripod Lamp and similar form-based descriptions do not create separate Product Types. An Arc Floor Lamp remains Lighting -> Floor Lighting -> Floor Lamp, with Form = Arc stored as an attribute when useful.

6. Desk Lamp Rule

A desk lamp is normally Lighting -> Table Lighting -> Table Lamp. Its task-oriented use should be stored as a use/function attribute such as Use = Desk / Task Lighting. A separate Desk Lamp Product Type should not be created for MVP unless recurring data later demonstrates a material matching need.

AID-CAT-006 | REVISION 1

LIGHTING STANDARD

7. Lighting Practical Attributes - MVP

These attributes support installation compatibility, lighting function, ambience and room matching. Universal product data remains governed by the relevant AID-DATA standards.

Attribute	Requirement	Controlled / Data Rule	Primary Matching Use
Light Source	Required	Replaceable Bulb / Integrated LED / Other verified	Technical compatibility and maintenance.
Bulb Base	Conditional	Verified base such as E27 / E14 / GU10	Replacement-bulb compatibility.
Number of Lights	Required	Positive whole number	Light output configuration and fixture character.
Bulb Included	Recommended	Yes / No / Unknown	Purchase readiness.
Dimmable	Required	Yes / No	Ambience and user preference.
Color Temperature	Recommended	Kelvin when known; otherwise Warm / Neutral / Cool	Ambience matching.
Wattage	Recommended	W or maximum supported W as verified	Technical suitability.
Lumen Output	Recommended	lm when verified	Functional brightness matching.
Adjustable	Required	Yes / No	Directional/position flexibility.
Form	Recommended	e.g. Arc / Tripod / Linear / Globe	Useful form matching without taxonomy expansion.
Use / Function	Recommended	Ambient / Task / Accent / Decorative	Lighting-purpose matching.
Cable / Drop Length	Conditional	cm	Ceiling-height and placement fit.
Suitable Room	Recommended	Controlled multi-select room values	Room-specific recommendation context.

8. Attribute Application Rules

Rule	Standard
Required	Complete for active Lighting products unless a controlled Not Applicable treatment is appropriate.
Conditional	Required only when relevant to the fixture or light-source architecture.
Recommended	Capture when reliably known and useful; do not guess technical specifications.
Technical claims	Wattage, lumen output, dimming and bulb compatibility must come from verified seller/manufacturer data.
Universal fields	Do not duplicate Material, Style, Colour, overall dimensions, Price, Availability or Images here.

9. Light Source and Bulb Rule

Integrated LED fixtures should not be assigned a replaceable Bulb Base unless the product genuinely uses an additional replaceable lamp. For replaceable-bulb fixtures, capture Bulb Base when verified. Bulb Included describes whether the required replaceable bulb is supplied with the offer and should not be inferred from product photography.

10. Color Temperature and Brightness

When Kelvin is available, retain the verified numeric value because it is more precise than descriptive labels. Warm, Neutral and Cool may be used as normalized customer-facing groups. Lumen Output is preferred for brightness matching when reliably provided; do not estimate lumens from wattage alone.

11. Dimming and Adjustability

Dimmable = Yes only when the fixture/light source supports dimming under the stated product conditions. Adjustable describes physical direction or position adjustment of the fixture or light head, not dimming. These are separate practical attributes.

12. Ceiling Drop and Room Fit

Cable / Drop Length is particularly relevant to Pendant Lights and Chandeliers. It should be captured when known because ceiling height, table clearance and circulation can materially affect recommendation suitability. Overall fixture dimensions remain under AID-DATA-006.

13. Classification Examples

Product Description	Classification	Key Attributes
3-light brass pendant	Lighting -> Ceiling Lighting -> Pendant Light	Lights = 3; Light Source / Drop Length as verified
Large decorative chandelier	Lighting -> Ceiling Lighting -> Chandelier	Lights / dimming / technical data as verified
Arc floor lamp	Lighting -> Floor Lighting -> Floor Lamp	Form = Arc; Use as applicable
Desk task lamp	Lighting -> Table Lighting -> Table Lamp	Use = Task; Adjustable as verified
Brass wall sconce	Lighting -> Wall Lighting -> Wall Light / Sconce	Light Source / Dimming as verified

14. Classification Rule

Classify lighting by its primary installation type and fundamental product identity. Do not create taxonomy branches for finish, material, light source, bulb type, number of lights, color temperature, decorative form or room placement.

15. Expansion Rule

Add a new Lighting Product Type or practical attribute only when recurring real product data cannot be represented accurately within the approved structure and the addition materially improves AIDOOi search, matching, filtering or purchasing.

16. Final Rule

Keep the Lighting taxonomy installation-based and lean: Lighting -> Category -> Product Type. Store technical, visual and secondary functional differences as controlled attributes whenever possible. Practical attributes should focus on installation compatibility, lighting function, ambience and meaningful customer decisions.
