Product & Project Viewing Logic

AID-LOG-012 | Revision 2 | MVP Logic Standard

Purpose. This standard governs physical product viewing, viewing confirmation, viewing deposits, viewing attribution, customer scheduling, seller confirmation and recovery before purchase.

Core Principle: Every product recommended by AIDOOi must be currently available and physically viewable before purchase.

1. Viewing Eligibility

A product is eligible for AIDOOi recommendation only when it is physically viewable through a confirmed Partner Store arrangement. Stock availability and physical viewability are separate conditions. A purchasable but non-viewable product is not eligible for recommendation.

2. Viewing Status

MVP uses two viewing statuses: **On Display** and **Viewing on Request**. On Display means the product is currently available for viewing at a known location. Viewing on Request means the Seller must prepare or make the product available at a confirmed location. "Not Available for Viewing" is not an eligible recommendation status.

3. Viewing Location & Stop Grouping

A Viewing Stop is a physical Viewing Location, not a Seller. Products from different Sellers at the same location may form one Stop. One Seller operating at multiple locations may create multiple Stops. The MVP optimization order is: Product Viewability -> Confirmed Location -> Minimum Stops -> Preparation Time.

4. Seller Confirmation & Freshness

On Display products with fresh seller-confirmed viewing data do not require manual confirmation for every request. Stale records require reconfirmation. Viewing on Request always requires explicit Seller confirmation of availability, location and preparation time. The MVP freshness default is 24 hours and remains configurable. Stock Last Confirmed and Viewing Last Confirmed are independent timestamps.

5. Viewing Request & Deposit

When a registered customer confirms a Viewing Request, AIDOOi calculates a **Viewing Reservation Deposit equal to 5% of the Current Selling Price of the products selected for viewing, capped at AED 500**. The deposit is not AIDOOi sales revenue; it is a customer commitment mechanism linked to the confirmed Viewing Request.

6. Viewing ID / QR Pass

After the required Seller confirmations and deposit payment, AIDOOi creates a unique Viewing ID and customer-facing QR / Viewing Pass. The Viewing record links Customer, Project/Recommendation, selected Product(s), AID, AIO Seller Offer, Seller, Viewing Location, scheduled date/time and deposit transaction. The code is used to confirm actual attendance and completion.

7. Viewing Completion & Deposit Outcome

A Viewing becomes **Completed** only when the customer attends the confirmed location/time and the Viewing ID / QR is validated through the approved MVP process. If the customer purchases through AIDOOi, 100% of the deposit is credited toward the purchase. If the customer completes the viewing but decides not to purchase or not to continue selecting products through AIDOOi, 100% of the deposit is refunded.

8. No-Show

If the customer does not attend the confirmed Viewing and the Viewing is recorded as **No-show**, the deposit is non-refundable. This reflects the operational effort and Seller preparation created by the confirmed request. Cancellation timing and any future late-cancellation policy may be defined separately; this Revision does not invent an unapproved cancellation window.

9. Viewing Attribution & Conversion Tracking

A completed Viewing creates an attribution record connecting the Customer, viewed Product(s), Seller/AIO, location and completion timestamp. This record allows AIDOOi to track the conversion path: Recommended -> Viewing Requested -> Viewing Confirmed -> Viewed -> Purchased / Not Purchased. Direct purchase from a Partner Store after an AIDOOi-generated viewing remains subject to the applicable Partner attribution terms.

10. Direct Purchase Protection

Technology alone cannot guarantee detection of every off-platform purchase. AIDOOi therefore uses three complementary controls: **Viewing Attribution Data**, **Partner Agreement obligations**, and **periodic reconciliation**. The Partner Agreement should define the applicable attribution window and reporting/commission obligations for AIDOOi-generated customers. The exact attribution-window duration is a commercial/legal term and is not hard-coded in this Logic Standard until approved.

11. Customer Scheduling

The customer receives a project-level Viewing Plan grouped by Stops. Each Stop contains confirmed location, date/time or approved window, relevant products and operational information. Different Stops may occur on different days. The final plan is issued only after required Seller confirmations.

12. Readiness & Recovery

Before the visit, AIDOOi performs the applicable readiness/reconfirmation step. If a product becomes unavailable or non-viewable, recovery priority is: (1) same Product / same Location through another eligible AIO; (2) same Product / existing Stop; (3) same Product / new Location with customer approval; (4) replacement Product through AID-LOG-009 and revalidation under AID-LOG-010. Material changes require customer approval.

13. Relationship to Recommendation & Visualization

A replacement caused by viewing availability must continue to satisfy hard fit and practical requirements, the minimum Product Match Score under AID-LOG-009, composition validity under AID-LOG-010, and current availability. Where the visible recommendation changes, AID-LOG-011 visualization and current project price must also be updated.

14. MVP Operational Boundary

MVP does not require an AIDOOi representative to accompany every customer. Assisted Viewing may be introduced later as an optional or premium service. MVP also excludes cross-seller product transfer, temporary consolidated AIDOOi showrooms and advanced traffic-route optimization.

15. End-to-End MVP Flow

Selected Recommendation -> Select Products for Viewing -> Calculate 5% Deposit (Max AED 500) -> Seller Confirmation -> Deposit Payment -> Viewing ID / QR -> Confirmed Viewing Plan -> Customer Attendance -> QR / Code Validation -> Viewing Completed -> Purchase with Deposit Credit OR No Purchase with Full Refund. If No-show -> Deposit Non-refundable. Completed Viewings also create attribution/conversion records.

Final Rule: AIDOOi uses physical viewing as both a customer-confidence feature and a measurable conversion event. Deposit handling must reward genuine attendance, while attribution records protect the commercial value created by AIDOOi.
