Checkout, Payment & Seller Settlement Logic

AID-LOG-014 | Revision 1 | MVP Standard

Purpose. This standard defines the MVP purchase flow from customer purchase request through final seller validation, unified payment to AIDOOi, multi-seller order creation, delivery confirmation, cancellation/refund handling and monthly Partner settlement.

The customer pays AIDOOi once. AIDOOi manages the multi-seller transaction internally and settles eligible Partner amounts monthly after commission and applicable adjustments.

1. Unified Customer Checkout

Even when a recommendation contains products from multiple Partner Stores, the customer-facing purchase experience remains unified.

Rule / Element	MVP Requirement
Customer experience	One Recommendation -> One Cart -> One Checkout -> One Payment to AIDOOi.
Payment recipient	The complete customer payment is made to AIDOOi, not separately to each Partner Store.
Backend responsibility	AIDOOi internally allocates the transaction across the applicable Partner Stores and Order Lines.
Multi-room projects	Full Apartment and Villa purchases remain one customer-facing order even when fulfilment and delivery occur through multiple Partners.

The complexity of a multi-seller order must remain primarily in the AIDOOi backend rather than being transferred to the customer.

2. Final Seller Validation Before Payment

AIDOOi must not capture customer payment until every product in the intended order has received final commercial and inventory validation.

Rule / Element	MVP Requirement
Purchase trigger	Customer selects Request Purchase; Sign Up / Sign In is required under AID-LOG-013 if the user is not already authenticated.
Seller validation	For every Order Line, confirm Stock Availability, Required Quantity and Final Selling Price with the applicable Partner Store.
Complete validation	Payment becomes available only when 100% of Order Lines are successfully validated.
Validation failure	If any line fails, do not charge the customer. First seek the same AID Product through another eligible AIO Offer, or offer a suitable replacement and revalidate the composition.
Price change	If a final price differs from the recommendation price, show the updated total to the customer before payment.
Customer confirmation	After all Seller validations are complete, show the final order total and obtain customer confirmation before payment.

AIDOOi must not capture customer payment until all Order Lines have received final confirmation of stock availability, required quantity and final selling price from the applicable Partner Stores.

3. Temporary Reservation & Purchase Window

Once all participating Partners have confirmed the order, the confirmed quantities are temporarily reserved to protect the customer checkout.

Rule / Element	MVP Requirement
Reservation start	Temporary reservation begins when the complete multi-seller order has received final confirmation.
Purchase window	MVP default: 24 hours, beginning from confirmation by the last required Seller.
Partner obligation	Confirmed quantities should remain reserved for the customer during the active Purchase Window.
Payment within window	Successful payment converts the temporary reservation into a Confirmed Order Allocation.
Expiry	If payment is not completed within 24 hours, temporary reservations are released and a new purchase attempt requires revalidation.
Configurable rule	The 24-hour period is an MVP default and may later be adjusted operationally.

All Sellers Confirm -> 24-hour Purchase Window -> Customer Pays -> Reservation becomes Confirmed Order.

4. Payment Status & Order Creation

Seller fulfilment begins only after AIDOOi has received successful payment for the complete Master Order.

Rule / Element	MVP Requirement
Payment states	Pending / Successful / Failed / Refunded.
Successful	Confirm the Master Order, create/confirm Seller Orders, lock Order Line transaction snapshots, convert reservations to confirmed allocations and notify relevant Partners.
Failed	Do not confirm the order. Allow the customer to retry payment while the active Purchase Window remains valid.
Pending	Keep the reservation active while the payment provider result is unresolved; do not begin Seller fulfilment.
No partial checkout	MVP does not treat partial payment across Sellers as a successful order. The complete Master Order must be successfully paid.
Fulfilment gate	No Partner may begin fulfilment on the basis of an unconfirmed or failed payment.

Seller fulfilment must never begin until AIDOOi has received confirmed successful payment for the complete Master Order.

5. Master Order, Seller Orders & Order Lines

AIDOOi uses a layered order structure so one customer payment can support independent Seller fulfilment and settlement.

Rule / Element	MVP Requirement
Master Order	The single customer-facing order representing the complete paid purchase.
Seller Order	A backend sub-order grouping Order Lines belonging to one Partner Store.
Order Line	The transaction-level record for an individual product/offer and quantity.
Transaction snapshot	At successful payment, lock AID Product, AIO Seller Offer, Seller, Quantity, Unit Price, Gross Line Amount and applicable Commission Rate.

Rule / Element	MVP Requirement
Price lock	Price changes after successful payment do not alter the paid Order Line.
Commission lock	A later change to the Partner's commission agreement does not retrospectively alter the commission snapshot of an already-paid Order Line.
Customer UI	The customer continues to see one overall order; Seller splits are primarily backend structures.

Settlement and fulfilment status may progress at Seller Order or Order Line level without requiring the entire Master Order to progress simultaneously.

6. Delivery, Receipt Confirmation & Settlement Eligibility

Partner settlement eligibility begins only after successful delivery and confirmed customer receipt.

Rule / Element	MVP Requirement
Delivery	The relevant Order Line is recorded as Delivered.
Customer confirmation	Customer confirms receipt of the delivered product.
Immediate eligibility	Customer-confirmed receipt makes the applicable Order Line Settlement Eligible, provided no applicable hold exists.
Auto-confirmation	If the customer does not confirm within 72 hours of recorded delivery, the line may auto-confirm if no Delivery Issue or Dispute has been reported.
Dispute hold	A reported issue/dispute pauses auto-confirmation and places the affected line Settlement On Hold until resolved.
Independent eligibility	One Partner or Order Line may become Settlement Eligible while other parts of the Master Order remain pending.

A Partner Store becomes eligible for settlement only after the product has been successfully delivered and receipt has been confirmed by the customer, including eligible 72-hour auto-confirmation where no dispute exists.

7. Cancellation & Refund Logic

Cancellation and refund should affect only the relevant parts of a multi-seller order wherever operationally possible.

Rule / Element	MVP Requirement
Before payment	There is no confirmed Order cancellation; the customer may abandon the Purchase Request.
Paid / before fulfilment	Customer may submit a Cancellation Request. Where cancellation remains operationally available, cancel the affected line and refund the applicable amount.
After fulfilment starts / before delivery	Cancellation is not automatic. AIDOOi reviews the request with the Partner because preparation, assembly or delivery costs may already exist.
After delivery	Handle as a Return / Refund Request under the applicable product/Partner terms.
Line-level handling	Do not cancel unaffected parts of the Master Order merely because one Order Line is cancelled or refunded.
Before settlement	A refunded/cancelled line does not become Settlement Eligible.
After settlement	An approved refund occurring after Seller settlement is recorded as an adjustment against the Partner's applicable future settlement.
Policy snapshot	Applicable cancellation/return terms should be captured for the transaction and presented to the customer before payment; MVP does not impose an invented universal return period across all Partners.

Cancellation and refund must operate at Order Line / Seller Order level whenever possible, without cancelling unaffected parts of the Master Order.

8. Commission & Monthly Partner Settlement

AIDOOi settles Partner Stores monthly based on eligible completed sales rather than merely on orders placed or customer payments received.

Rule / Element	MVP Requirement
Commission source	Commission Rate is defined by the applicable Partner commercial agreement and may differ between Partners.
Transaction commission	The applicable Commission Rate is snapshot and locked at Order Line level when payment succeeds.
Settlement eligibility	Only lines delivered and customer-confirmed, or validly auto-confirmed after 72 hours without dispute, may enter settlement.
Settlement cut-off	Only Order Lines reaching Settlement Eligible status before the applicable monthly cut-off enter that settlement period.
Calculation	Gross Eligible Sales - AIDOOi Commission - Approved Refunds / Adjustments = Net Settlement Payable.
Partner statement	AIDOOi generates a monthly settlement statement showing the eligible transaction basis, commission and applicable adjustments.
Payment timing	The exact monthly settlement/payment date is not hard-coded in this MVP standard and may be defined in the applicable Partner Agreement.

Only Order Lines that have completed delivery and customer receipt confirmation, or eligible auto-confirmation, before the applicable settlement cut-off may enter that Partner's monthly settlement.

9. End-to-End MVP Purchase Flow

Request Purchase -> Final Seller Validation -> All Order Lines Confirmed -> Temporary Reservation -> 24-hour Purchase Window -> Customer Final Confirmation -> One Payment to AIDOOi -> Master Order + Seller Orders -> Fulfilment -> Delivery -> Customer Receipt Confirmation / Eligible 72-hour Auto-Confirmation -> Settlement Eligible -> Monthly Partner Settlement

If validation, payment, delivery or receipt confirmation fails at any stage, only the affected transaction components should be held or recovered where possible, while preserving unaffected parts of the Master Order.

10. MVP Boundary

This standard defines the commercial transaction logic required for MVP. Detailed fulfilment operations, delivery-status progression and operational exception handling may be defined in subsequent AID-LOG standards. Payment-provider implementation, accounting treatment, tax invoicing and regulatory settlement mechanics must follow the applicable operational, contractual and legal requirements when implemented.

Final Principle: AIDOOi should provide one trusted checkout to the customer while maintaining precise transaction-level accountability for every Partner, product, payment, delivery confirmation, commission and settlement.
