Order Fulfilment, Status & Exception Management Logic

AID-LOG-015 | Revision 1 | MVP Standard

Purpose. This standard defines how paid AIDOOi orders progress through Partner fulfilment, delivery, receipt confirmation, issue handling and final order completion during the MVP stage.

AIDOOi coordinates and governs post-payment fulfilment; Partner Stores execute it.

1. Post-Payment Responsibility Model

AIDOOi does not act as the logistics or after-sales operator. Each Partner Store remains responsible for executing the fulfilment and post-sale obligations associated with its products.

Element	MVP Requirement
AIDOOi responsibilities	Order routing, customer-facing status visibility, recording operational confirmations, issue routing, settlement governance and Settlement Hold / Release.
Partner Store responsibilities	Preparation, delivery, assembly where applicable, product condition, damage/defect handling, returns, warranty and after-sales service.
Operational boundary	AIDOOi may coordinate and track an issue but does not become the operational executor of Seller delivery, repair, replacement or warranty work.
Commercial control	Because customer payment is collected by AIDOOi, AIDOOi retains governance over settlement and may place affected Order Lines on Settlement Hold when required.

Post-payment operational execution belongs to the Partner Store; AIDOOi maintains transaction governance and customer visibility.

2. Partner Post-Sale Agreement

Post-sale responsibilities are defined contractually between AIDOOi and each Partner Store through a separate signed agreement or operational addendum.

Element	MVP Requirement
Agreement scope	Preparation, delivery, assembly where applicable, product condition, damaged/defective goods, returns, warranty and after-sales service.
Partner obligation	The Partner must execute its agreed post-sale responsibilities for products sold through AIDOOi.
Logic boundary	AID-LOG-015 governs workflow and accountability; detailed commercial/service terms remain in the applicable Partner Post-Sale Agreement.
Partner onboarding	The applicable post-sale agreement must be in place before a Partner is operationally enabled for customer orders.

3. Fulfilment Status Architecture

Fulfilment status is maintained primarily at Order Line level. Seller Order and Master Order status are derived from their underlying Order Lines.

Element	MVP Requirement
Confirmed	Successful payment has confirmed the Order Line and it has been routed for Partner fulfilment.
Preparing	Partner has begun preparing the product/order for delivery.
Ready for Dispatch	Partner confirms the applicable product is ready to leave its fulfilment location.
Dispatched	Partner confirms the product has been dispatched.
Delivered	Delivery has been recorded as completed.
Receipt Confirmed	Customer confirms receipt, or the line qualifies for the 72-hour auto-confirmation rule defined in AID-LOG-014.
Settlement Eligible	System eligibility condition reached under AID-LOG-014, provided no applicable hold/dispute remains.

Fulfilment status describes where the Order Line is in its lifecycle; operational issues are tracked separately as exception flags.

4. MVP Status Confirmation Method

No Seller Portal or automated fulfilment integration is required for MVP. Operational status confirmations may be handled manually.

Element	MVP Requirement
Primary method	AIDOOi Operations contacts or receives confirmation from the applicable Partner Store by telephone.
System recording	AIDOOi Admin records the confirmed status in the AIDOOi system.
Seller system access	Partners do not require direct access to change fulfilment statuses during MVP.
Future scalability	The same status model may later be connected to a Seller Portal, API or automated integration without changing the core order architecture.

During the MVP stage, Partner fulfilment statuses and post-sale issue resolutions may be confirmed operationally by telephone and recorded by AIDOOi Admin.

5. Partial Delivery & Multi-Seller Fulfilment

A Master Order may contain products from multiple Partner Stores and may be fulfilled across different delivery dates.

Element	MVP Requirement
Independent progression	Each Order Line progresses independently through fulfilment, delivery, receipt confirmation and settlement eligibility.
Seller Order	Different Seller Orders may be at different fulfilment stages at the same time.
Partial Seller delivery	A single Partner may deliver some Order Lines before others.
Settlement	Completed and receipt-confirmed Order Lines do not need to wait for unfinished Order Lines to become Settlement Eligible.
Customer experience	Customer continues to see one Master Order with understandable delivery/status grouping.
Delivery consolidation	Where practical, AIDOOi and the Partner should prefer consolidated deliveries to reduce unnecessary customer disruption; this is an operational preference, not a hard requirement.

Partial delivery must not block completed and confirmed Order Lines from progressing.

6. Exception Flags & Post-Sale Issues

Exceptions are tracked separately from the main fulfilment status so the system can show both lifecycle position and any active problem.

Element	MVP Requirement
MVP exception flags	Delayed; Delivery Failed; Damaged; Missing; Cancellation Requested; Return Requested; Disputed.
Customer issue	Customer may report an issue through AIDOOi; AIDOOi routes the issue to the responsible Partner Store.
Seller resolution	The Partner handles the operational resolution according to the signed Post-Sale Agreement.
AIDOOi role	AIDOOi records and tracks the issue status but does not perform Seller operational duties.
Settlement protection	Affected Order Lines may be placed on Settlement Hold while a material delivery/product dispute remains unresolved.
Resolution	Once the Seller has resolved the issue and the applicable confirmation is received, AIDOOi records the resolution and releases or adjusts settlement as appropriate under AID-LOG-014.

No post-sale issue transfers the Seller's operational fulfilment responsibility to AIDOOi.

7. Material Changes & Customer Approval

Any post-payment change that materially alters what the customer purchased must remain transparent.

Element	MVP Requirement
Material changes	Product substitution, material price adjustment, materially changed delivery commitment, cancellation/refund or another change affecting the paid purchase.
No silent substitution	A Partner may not silently replace a purchased product with another product.
Customer approval	Where a material alternative is proposed, customer approval is required before implementation.
Recommendation impact	If a product replacement affects a recommended composition, applicable AID-LOG-009 / AID-LOG-010 validation and AID-LOG-011 visualization updates should be applied as relevant.
Refund path	Where an acceptable resolution is unavailable, the affected Order Line may proceed through the cancellation/refund logic in AID-LOG-014.

No fulfilment exception may silently change the customer's purchased product or agreed commercial outcome.

8. Customer Receipt & Settlement Handoff

Delivery completion does not by itself release Partner settlement.

Element	MVP Requirement
Delivered	Partner delivery status is recorded.
Customer receipt	Customer confirms receipt.
Auto-confirmation	If no customer confirmation is received within 72 hours after recorded delivery and no issue/dispute has been reported, the applicable Order Line may be auto-confirmed under AID-LOG-014.
Open issue	An active qualifying issue/dispute prevents automatic settlement progression until resolved.

Element	MVP Requirement
Settlement handoff	Once receipt is confirmed or validly auto-confirmed and no hold remains, the Order Line passes to the settlement eligibility rules of AID-LOG-014.

9. Master Order Completion

The Master Order is completed only when every Order Line has reached an acceptable final state and no unresolved issue remains.

Element	MVP Requirement
Completed line	Receipt Confirmed / eligible Auto-Confirmed, or Cancelled & Refunded where applicable.
Open issue	Any unresolved material Issue or Dispute prevents the Master Order from being marked Completed.
Independent settlement	Master Order completion does not change the line-level monthly settlement model defined in AID-LOG-014.
Derived status	Master Order completion is derived from its Order Lines rather than manually overriding unfinished lines.

All Order Lines Finalized + No Open Issues = Master Order Completed.

10. End-to-End MVP Fulfilment Flow

After successful payment, the operational path is intentionally lean:

Payment Successful -> Order Routed to Partner Store(s) -> Partner Executes Fulfilment -> Telephone Status Confirmation -> AIDOOi Records Status -> Delivery -> Customer Receipt Confirmation / Eligible 72-hour Auto-Confirmation -> Settlement Eligibility -> Master Order Completion when all lines are finalized.

11. MVP Boundary

AIDOOi does not require a Seller Portal, automated logistics integration, in-house delivery operation, repair team or centralized after-sales department for MVP. Detailed delivery, warranty, return and after-sales obligations are governed through Partner agreements. AIDOOi retains the minimum governance layer necessary to protect the customer transaction and control settlement.

Final Principle: AIDOOi should remain operationally lean after payment while preserving clear Seller accountability, customer visibility and settlement control.
