AIDOOi MVP Master Plan

Product Framework + Standards Architecture + System Specification + Development Handoff | Revision 1

Scope. This Master Plan intentionally excludes Business & Strategy documents. It converts the approved AIDOOi product framework and 47 MVP standards into one implementation map for Frontend, Backend, Data, Recommendation, Operations and Development.

This document is an implementation map, not a replacement for the underlying standards. Where detailed rules are required, the referenced AID-DATA, AID-CAT, AID-SPC and AID-LOG standards remain authoritative.

1. System Architecture

Layer	Purpose	Primary Standards
Customer Frontend	Profiling, recommendation, visualization, viewing and purchase experience.	AID-SPC-001-009; AID-LOG-009-015; AID-DATA-015
Product Intelligence	Canonical products, variants, seller offers, attributes and media.	AID-DATA-001-014; AID-CAT-001-008
Recommendation Engine	Eligibility, scoring, composition and four recommendation options.	AID-LOG-001-010
Visualization	Product-faithful or concept representation of selected recommendations.	AID-LOG-011
Viewing & Attribution	Physical viewing, deposit, QR confirmation and conversion attribution.	AID-LOG-012 Rev 2
Commerce	Checkout, seller validation, payment, order splitting and settlement.	AID-LOG-014
Operations	Partner/admin workflows, fulfilment, issues and post-sale status.	AID-LOG-013; AID-LOG-015
UI System	Brand, colour, typography, components, responsive behaviour.	AID-DATA-015

2. Frontend Customer Paths

The frontend begins with one common entry question: **What are you furnishing?** The answer routes the customer into one of the approved SPC paths. Frontend questions remain lean; backend logic may be more complex.

Selection / Path	Frontend Inputs	Backend References	Output
Living Room	Room L x W; optional photo/floor plan; Style; Colour; Budget	SPC-002; LOG-002; DATA-007/009; LOG-009/010	4 recommendation compositions
Bedroom	Room L x W; Bed Size; optional media; Style; Colour; Budget	SPC-003; CAT-004; LOG-003; LOG-009/010	4 recommendation compositions
Dining Room	Room L x W; Dining Capacity; optional media; Style; Colour; Budget	SPC-004; CAT-003; LOG-004; LOG-009/010	4 recommendation compositions
Home Office	Room L x W; Workspace Users; optional media; Style; Colour; Budget	SPC-005; LOG-005; LOG-009/010	4 recommendation compositions
Studio Apartment	Total Area; Sleeping Setup; optional layout/photos; Style; Colour; Budget	SPC-006; CAT-004; LOG-006; LOG-009/010	Integrated studio compositions
Full Apartment	Bedrooms + modules; bedroom consistency; dining/living; optional office; overall Style/Colour; total Budget	SPC-007 Rev 2; LOG-002-005; LOG-007; LOG-009/010	Coordinated whole-apartment project
Villa	Floors; room modules + floor; repeated-space preferences; overall Style/Colour; total Budget	SPC-008 Rev 2; LOG-002-005; LOG-008; LOG-009/010	Coordinated multi-floor project
Individual Product	Product Category; relevant practical attributes; Style; Colour; Budget	SPC-009; CAT-001-008; LOG-001; LOG-009	Ranked product recommendations

3. Common Frontend Flow After Profiling

Stage	Frontend Experience	System / Standard
Recommendation Generation	Show up to four valid options: Best Overall Match, Best Value, Best Style Match, Premium Choice.	LOG-009 + LOG-010
Recommendation Detail	Composition products, match information, current prices, availability and project total.	LOG-009/010; DATA-010/011
Visualization	Show product-faithful visualization where possible; concept visualization where exact fidelity is not supportable.	LOG-011

Stage	Frontend Experience	System / Standard
Product Interaction	Tap product -> Product Card -> View Details / Replace.	LOG-011; DATA-001-012
Replace Product	Show eligible alternatives; customer selects; revalidate product + composition + price.	LOG-009/010/011
Request Viewing	Registration required; select products; seller confirmation; 5% deposit capped at AED 500; Viewing ID/QR.	LOG-012 Rev 2; LOG-013
Viewing Outcome	Completed viewing -> purchase credit or full refund if no purchase. No-show -> non-refundable. Create attribution record.	LOG-012 Rev 2
Request Purchase	Registration required; final seller validation; temporary reservation; 24-hour purchase window.	LOG-013/014
Checkout	One Cart -> One Checkout -> One Payment to AIDOOi.	LOG-014
Order Tracking	One Master Order with seller/order-line status visibility.	LOG-014/015

4. Master Data & Core System Entities

The following entity map is the required starting architecture for the technical database specification. Exact columns, data types, indexes and API contracts are the next implementation layer.

Domain	Core Entities	Key Relationships / Standards
Product	Parent Product; Canonical Product/Variant (AID); Category; Attributes; Images	Parent -> AID variants; DATA-001-009, 012-014; CAT-001-008
Seller Offer	AIO Seller Offer; Seller SKU; Price; Stock; Viewing; Delivery	AID -> many AIO; DATA-005,010,011
Partner	Partner Store; Location; Agreement; Operational Contacts	Partner -> Locations -> AIO offers; LOG-013
Customer	Guest Session; Registered User	Guest may explore; registration required at Viewing/Purchase; LOG-013
Project	Customer Project; Project Path; Room/Module; Preferences; Budget	User -> Project -> Path/Modules; SPC-001-009; LOG-001-008
Recommendation	Recommendation Run; Product Candidate Score; Composition; Option	Project -> candidates -> compositions; LOG-009/010
Visualization	Visualization Record; Product Hotspot/Card links	Recommendation -> visualization -> AID/AIO; LOG-011
Viewing	Viewing Request; Viewing Stop; Viewing Product; Deposit; Viewing ID/QR; Attendance; Attribution	Recommendation -> Viewing -> attributed conversion; LOG-012 Rev 2
Commerce	Purchase Request; Cart; Seller Validation; Reservation; Payment	Recommendation -> purchase -> payment; LOG-014
Order	Master Order; Seller Order; Order Line; Transaction Snapshot	Payment -> Master Order -> Seller Orders -> Lines; LOG-014/015
Fulfilment	Fulfilment Status; Delivery; Receipt Confirmation; Issue/Dispute	Order Line -> fulfilment/issues; LOG-015
Settlement	Settlement Eligibility; Commission Snapshot; Partner Settlement	Order Line -> settlement; LOG-014

5. Critical Data Relationships

Product: Parent Product -> AID Variant -> AIO Seller Offer -> Partner / Price / Stock / Viewing / Delivery.

Customer: User -> Project -> Project Path -> Room/Property Modules -> Preferences -> Budget.

Recommendation: Project -> Eligible AIDs/AIOs -> LOG-009 Product Scores -> LOG-010 Composition Options -> LOG-011 Visualization.

Viewing: Recommendation -> Selected Viewing Products -> Viewing Stop(s) -> Deposit -> Viewing ID/QR -> Attendance -> Attribution -> Purchase/Refund.

Commerce: Recommendation -> Purchase Request -> Seller Validation -> Reservation -> Payment -> Master Order -> Seller Order -> Order Line -> Fulfilment -> Receipt -> Settlement.

IDs identify records; they do not encode business meaning. Product IDs follow AID-DATA-005 and AI must never infer product characteristics from an ID.

6. Frontend vs Backend Responsibility

Concern	Frontend	Backend
Path routing	Show the eight customer choices and only relevant questions.	Resolve SPC path and invoke relevant room/project LOG.
Fit	Collect minimum required dimensions/capacity.	Apply fit/circulation/composition rules from LOG-002-009.
Style / Colour	Collect controlled preference.	Use DATA-007/009 compatibility logic for ranking/harmony.
Budget	Show approved tier/range choices.	Apply LOG-001-008 allocation and current selling prices.
Recommendations	Present up to four clear options.	Eligibility -> scoring -> composition -> threshold validation.
Visualization	Display visual and product interactions.	Preserve product identity and composition; maintain traceability to AID/AIO.
Viewing	Select items, pay deposit, show QR/pass and plan.	Seller confirmation, deposit state, attendance, attribution, recovery.
Checkout	One cart/checkout/payment.	Seller validation, reservation, payment, order split, snapshots.

Concern	Frontend	Backend
Order status	Simple customer-facing grouped status.	Line-level seller/fulfilment/issue state and settlement eligibility.
Administration	No seller dashboard in MVP.	AIDOOi Admin/Specialist creates/verifies products and records operational updates.

7. Development Modules / Handoff

Module	Developer Deliverable	Primary References
Frontend Web/PWA	Responsive customer journey, recommendations, visualization interaction, viewing, checkout, orders.	SPC-001-009; DATA-015; LOG-010-015
Product Data Service	Canonical products/variants, seller offers, taxonomy, attributes, media and validation.	DATA-001-014; CAT-001-008
Recommendation Service	Hard filters, product scoring, composition generation, four-option optimization.	LOG-001-010
Visualization Integration	Visualization request/result records, product traceability, replacement refresh.	LOG-011
Viewing Service	Stops, seller confirmations, deposit, QR/pass, attendance, refund/credit and attribution.	LOG-012 Rev 2
Commerce Service	Seller validation, reservation window, payment state, Master/Seller orders, line snapshots.	LOG-014
Operations/Admin	Partner activation, product administration, phone-confirmed fulfilment updates, issue handling.	LOG-013/015
Settlement	Commission snapshots, line eligibility, monthly settlement calculations and adjustments.	LOG-014
Audit & Status History	Critical state changes, confirmations, price/commission snapshots and issue history.	DATA-014; LOG-012-015

8. Recommended MVP Build Sequence

Phase 1 - Foundation: Database/entity model, IDs, taxonomy, product/offer/partner data, authentication and Admin foundation.

Phase 2 - Customer Profiling: SPC routing, room/property inputs, Style/Colour/Budget UI and project persistence.

Phase 3 - Recommendation: hard filters, LOG-009 scoring, LOG-010 composition generation and recommendation presentation.

Phase 4 - Visualization: LOG-011 integration, Product Cards and replacement/revalidation flow.

Phase 5 - Viewing: seller confirmation, 5% capped deposit, Viewing ID/QR, Stops, attendance, refund/credit and attribution.

Phase 6 - Commerce: final seller validation, 24-hour reservation, one checkout/payment, order splitting and transaction snapshots.

Phase 7 - Operations: fulfilment status, issues, receipt confirmation, settlement eligibility and monthly settlement.

Phase 8 - QA / Acceptance: validate every customer path and critical state transition against the referenced standards.

9. MVP Acceptance Gates

Gate	Minimum Acceptance Condition
Product Data	Only Verified/Active canonical products and eligible AIO offers can enter recommendation.
Recommendation	No hard requirement failure; Product Match >=60; Composition Score >=70.
Fit	Fit/function cannot be overridden by Style, Colour, discount or Premium objective.
Four Options	Options are valid and meaningfully differentiated where inventory permits; no artificial weak option.
Visualization	Recommended purchasable products remain traceable and recognizably represented.
Viewing	Every recommended product is physically viewable; confirmed viewing uses valid location and required confirmation.
Deposit	5% of selected viewing products, maximum AED 500; Completed/no purchase = full refund; purchase = full credit; No-show = non-refundable.
Payment	No capture before all required Seller validations; no seller fulfilment before complete successful payment.
Orders	Master Order splits correctly into Seller Orders/Order Lines with locked transaction snapshots.

Gate	Minimum Acceptance Condition
Settlement	Only delivered + receipt-confirmed/eligible auto-confirmed lines become settlement eligible.

10. Standards Reference Register

AID-DATA-001-015: shared product data, quality and UI design system. **AID-CAT-001-008:** category taxonomy and practical attributes. **AID-SPC-001-009:** customer project/path journeys. **AID-LOG-001-015:** price, composition, recommendation, visualization, viewing, administration, commerce and fulfilment logic.

Total MVP standards referenced by this Master Plan: 47.

Next technical artifact: detailed Master Data Dictionary & System Specification containing table names, field names, data types, required/optional status, foreign keys, controlled values, state transitions, validation rules and API-facing objects. This Master Plan defines where each of those technical details belongs.
