AIDOOi

Product Data Intelligence Matrix

A Practical Data-Entry Framework for the First 2,000 Products

Build the catalogue once - and make the same data ready for filtering, recommendation, scoring, controlled customisation, commerce and future platform import.

MVP Data Architecture | August 2026

1. Data Strategy

The first 2,000 showroom and warehouse items should not be entered as ordinary e-commerce listings. They should be structured as the first real AIDOOi product database.

Two data layers are required:

Layer 1 - Universal Product Data: fields shared by every product.
Layer 2 - Category Intelligence Data: attributes that change according to product type, such as sofa upholstery, dining-table seating capacity, artwork subject or sculpture form.

The objective is to avoid re-entering the catalogue later. The same master data should be importable into the AIDOOi platform.

2. Universal Product Master

These fields should be captured for every product, regardless of category.

Field	Example	Status	Primary Use
Product ID	BH-SOF-0001	Required	Unique identification
Parent Product ID	BH-SOF-001	Required for variants	Connect variants
Brand	Brand A	Required	Marketplace / brand mode
Product Name	Como 3-Seater Sofa	Required	Display
Main Category	Furniture	Required	Top-level filtering
Category	Sofa	Required	Journey / filtering
Subcategory	3-Seater Sofa	Required	Narrowing
SKU	SF-220-BG-01	Required	Inventory / commerce
Variant	Beige Boucle	Required when applicable	Customisation
Width / Depth / Height	220 / 95 / 82 cm	Required	Space compatibility
Weight	62 kg	Optional	Logistics
Primary Colour	Beige	Required	Matching
Secondary Colour	Cream	If applicable	Matching
Material Family	Fabric	Required	Filtering
Specific Material	Boucle	Required	Recommendation
Primary Style	Contemporary	Required	Scoring
Secondary Style	Organic Modern	Recommended	Scoring
Price	AED 4,200	Required	Budget
Original Price	AED 4,800	If applicable	Commerce
Stock Status	In Stock	Required	Eligibility
Quantity	4	Recommended	Inventory
Showroom Location	Dubai	Required	Physical viewing
Warehouse Location	Jebel Ali	Recommended	Fulfilment
Delivery Status	Available	Required	Commerce
Assembly Required	Yes	Recommended	Commerce
Main Image	File / URL	Required	UI
Additional Images	4-6 images	Required	UI / visualisation
Product Description	Short plain-language description	Required	User understanding
Data Status	Complete / Review	Required	QA

3. Sofa Intelligence Matrix

Attribute	Controlled Values / Data
Sofa Type	2-Seater / 3-Seater / 4-Seater / Sectional / L-Shaped / Modular / Loveseat / Sofa Bed
Seating Capacity	1 / 2 / 3 / 4 / 5+
Configuration	Straight / L-Shape / U-Shape / Modular
Orientation	Left / Right / Reversible / N/A
Upholstery Family	Fabric / Leather / Velvet / Suede-Microfiber / Boucle
Firmness	Soft / Medium / Firm
Seat Depth	Compact / Standard / Deep
Back Style	Low / Medium / High
Leg Material	Wood / Metal / Hidden
Space Suitability	Compact / Medium / Large
Convertible / Sofa Bed	Yes / No
Storage	Yes / No
Removable Covers	Yes / No
Washable Covers	Yes / No
Modular	Yes / No

4. Armchair & Accent Chair Matrix

Attribute	Controlled Values / Data
Chair Type	Accent / Lounge / Recliner / Swivel / Occasional
Dimensions	Exact W x D x H
Upholstery	Fabric / Leather / Boucle / Velvet / etc.
Base	Legs / Pedestal / Swivel
Arm Type	Armless / Low / Standard
Comfort	Soft / Medium / Firm
Space Suitability	Compact / Medium / Large
Statement Level	Subtle / Balanced / Statement

5. Coffee, Side & Console Table Matrix

Attribute	Controlled Values / Data
Type	Coffee / Side / Nesting / Console
Shape	Round / Oval / Square / Rectangle / Organic
Top Material	Wood / Marble / Stone / Glass / Metal
Base Material	Wood / Metal / Stone
Dimensions	Exact width/diameter + depth + height
Storage	Yes / No
Set	Single / Set of 2 / Set of 3
Visual Weight	Light / Medium / Heavy
Colour / Finish	Controlled palette / finish dictionary

6. Beds & Bedroom Storage Matrix

Attribute	Controlled Values / Data
Bed Size	Single / Double / Queen / King / Super King
Mattress Size	Exact cm - separate from frame
Overall Frame Size	Exact W x D x H
Headboard	Yes / No + exact height
Upholstered	Yes / No
Upholstery	Fabric / Velvet / Boucle / Leather
Storage	None / Drawer / Hydraulic
Base Type	Platform / Legs / Box
Space Suitability	Compact / Medium / Large
Nightstand / Dresser	Dimensions, drawers, shelves, storage capacity, material, finish, handles, base style

7. Dining Furniture Matrix

Attribute	Controlled Values / Data
Table Shape	Round / Oval / Rectangle / Square
Seating Capacity	2 / 4 / 6 / 8 / 10+
Dimensions	Exact L x W x H
Extendable	Yes / No + extended length
Top Material	Wood / Marble / Stone / Glass / Ceramic
Base Material	Wood / Metal / Stone
Base Type	4-Leg / Pedestal / Double Pedestal
Space Suitability	Compact / Medium / Large
Dining Chair	Upholstered, material, arm/armless, seat height, width, stackable, comfort, sold individually/set

8. Home Office Matrix

Attribute	Controlled Values / Data
Desk Type	Writing / Executive / Compact / Corner / Standing / Height Adjustable
Dimensions	Exact W x D x H
Number of Users	1 / 2
Storage	None / Drawers / Shelves / Cabinet
Cable Management	Yes / No
Monitor Capacity	1 / 2 / 3+
Space Suitability	Compact / Medium / Large
Office Chair	Ergonomic, height adjustment, lumbar support, armrests, headrest, swivel, wheels, upholstery, weight capacity

9. Rugs & Lighting Matrix

Attribute	Controlled Values / Data
Rug Shape	Rectangle / Round / Runner / Irregular
Rug Dimensions	Exact dimensions
Rug Material	Wool / Cotton / Synthetic / Natural Fibre
Pile / Texture	Low / Medium / High; Smooth / Textured / Shaggy
Pattern	Solid / Geometric / Abstract / Traditional / Organic
Colour Intensity	Neutral / Soft / Bold
Lighting Type	Floor Lamp / Table Lamp / Pendant / Chandelier / Wall Light
Lighting Attributes	Dimensions, material, finish, shade, light direction, bulb type, colour temperature, dimmable, placement
Statement Level	Subtle / Balanced / Statement

10. Sculptures & Decorative Accessories Matrix

Attribute	Controlled Values / Data
Sculpture Type	Tabletop / Floor / Wall Sculpture
Subject	Horse / Human Figure / Face / Animal / Bird / Nature / Abstract / Geometric / Architectural / Other
Representation	Realistic / Stylised / Abstract
Material	Metal / Resin / Ceramic / Stone / Wood / Glass / Mixed
Finish	Gold / Silver / Bronze / Black / White / Natural / Multicolour
Size	Small / Medium / Large / Oversized + exact dimensions
Character	Minimal / Elegant / Artistic / Dramatic / Playful / Classic
Vase Type	Decorative / Floral / Sculptural / Floor Vase
Decorative Objects	Bowls / Boxes / Trays / Bookends / Objects
Placement	Tabletop / Shelf / Console / Floor / Wall

11. Wall Art & Mirrors Matrix

Attribute	Controlled Values / Data
Artwork Type	Painting / Canvas / Print / Photography / Relief / Mixed Media / Framed Art / Set-Triptych
Subject	Abstract / Nature / Landscape / Botanical / Architecture / City / Human-Figurative / Portrait / Animal / Geometric / Typography / Minimal
Orientation	Portrait / Landscape / Square / Panoramic / Set
Dimensions	Exact W x H
Dominant Colours	Primary / Secondary / Accent
Colour Character	Neutral / Warm / Cool / Monochrome / Colourful
Visual Intensity	Subtle / Balanced / Statement
Frame	Framed / Unframed + colour + material
Mirror Type	Wall / Floor / Leaning
Mirror Shape	Round / Oval / Rectangle / Arch / Organic
Mirror Attributes	Dimensions, frame material/colour, frameless, orientation, placement

12. Controlled Vocabulary - Critical Data Rule

Free-text entry should be minimised. If different data-entry staff describe the same colour or style differently, filtering and scoring quality will deteriorate.

Example - Colour

Colour Family	Example Marketing Colour
White / Off-White / Cream	Ivory Mist
Beige / Sand / Taupe	Desert Sand
Brown / Natural Wood	Walnut Brown
Grey / Black	Graphite Grey
Blue / Green / Red / Orange / Yellow / Pink / Purple	Brand-specific colour name
Gold / Silver / Bronze	Brushed Bronze
Multicolour	Product-specific name

Store both the **standard AIDOOi colour family** and the brand's exact marketing colour name. Apply the same principle to materials, styles, shapes, finishes and subjects.

13. AIDOOi Style Dictionary

Style must also use a controlled dictionary. A recommended MVP list is:

MVP Style Families	Use
Contemporary	Primary / secondary compatibility
Modern	Primary / secondary compatibility
Minimalist	Primary / secondary compatibility
Scandinavian	Primary / secondary compatibility
Japandi	Primary / secondary compatibility
Organic Modern	Primary / secondary compatibility
Mid-Century Modern	Primary / secondary compatibility
Industrial	Primary / secondary compatibility
Classic	Primary / secondary compatibility
Modern Classic	Primary / secondary compatibility
Luxury / Glam	Primary / secondary compatibility
Bohemian	Primary / secondary compatibility
Coastal	Primary / secondary compatibility

A product can carry a primary style, a secondary style and eventually compatibility scores. Example: Organic Modern = 100, Contemporary = 85, Japandi = 70.

14. Parent Product & Variant Architecture

Variants must be connected from day one. A sofa available in three sizes, four colours and two fabrics should not become 24 unrelated products.

Parent Product: SOF-COMO

Variants:
SOF-COMO-220-BE-BOU
SOF-COMO-220-GR-BOU
SOF-COMO-240-BE-BOU
...

This structure is essential for AIDOOi's controlled customisation. Once a user selects a matched product, the system can open only its compatible variants instead of searching the entire catalogue again.

15. Product Photography Standard

Photography should be captured consistently while products are being catalogued or moved. Recommended image set:

Image	Purpose
1. Hero / Front	Primary product card and catalogue view
2. 45-degree Angle	Form and proportion
3. Side View	Depth and construction
4. Material Close-up	Texture and user education
5. Scale / Context	Help users understand size
6. Additional Detail	Hardware, stitching, finish or special feature

Material close-ups are particularly important because AIDOOi is designed for non-expert users. The platform should be able to explain a material such as Boucle using both a simple definition and a clear real-world visual.

16. Recommended Data-Entry Workflow

Step	Action
1	Lock the complete category and subcategory hierarchy.
2	Lock controlled vocabularies for colours, styles, materials, subjects, shapes, finishes and other reusable attributes.
3	Lock the category-specific attribute matrix.
4	Enter a pilot sample of approximately 50 products across different categories.
5	Test whether the AIDOOi journey can genuinely filter and score those products using the captured data.
6	Identify missing or ambiguous fields and revise the matrix.
7	Freeze the validated template and begin full entry of the approximately 2,000 products.
8	Run QA continuously rather than waiting until the end.

The 50-product pilot is critical. It prevents the team from spending days entering 2,000 items only to discover later that important recommendation fields were never captured.

17. Recommended Master Workbook Structure

Sheet	Purpose
01_Product_Master	Universal information for every product
02_Variants	Colour, size, material and other variants
03_Furniture_Attributes	Category-specific furniture intelligence
04_Accessories	Sculptures, vases, decorative objects, etc.
05_Wall_Art	Artwork-specific taxonomy
06_Style_Dictionary	Controlled styles + definitions
07_Colour_Dictionary	Standard colours + marketing names
08_Material_Dictionary	Standard materials + user-friendly descriptions
09_Category_Dictionary	Category / subcategory hierarchy
10_Images	Product-image mapping
11_Inventory	Stock, location and availability
12_Data_QA	Missing fields, errors, review and approval

The workbook is a **data-entry interface**, not the final database. Its structure should be designed so the development team can later import it directly into the platform database.

18. Final Data Principle

The catalogue should be built once and designed for multiple future uses:

Showroom Catalogue
+
Online Commerce
+
AIDOOi Filtering
+
Recommendation & Scoring
+
Controlled Customisation
+
Physical Viewing
+
Future Platform Import

The immediate next step should be to convert this framework into the actual **AIDOOi Master Data-Entry Workbook**, with dropdown-controlled values, validation rules, parent/variant logic and QA fields, and then test it with the first 50 real products before scaling to the full catalogue.
